Dear Mr. Khare:

Recently you reviewed an article submitted to IEEE Access entitled, "Attribute-Guided Alignment Model for Person Re-identification with Feature Distillation and Enhancement". Please note that this article was rejected, and the authors were asked to update their article based on the reviewers' concerns.

The authors have resubmitted their revised article and supplied a "list of updates" that highlights all edits made, as well as their responses to the previous reviewers' concerns.

We would appreciate if you could take another look at this improved version to determine if your concerns have been addressed, and to ensure that you are satisfied with the updates.

After completing the review, you can easily receive credit on your Publons profile.

For additional information on IEEE Access and tips on completing a quality review, please visit our [Reviewer Best Practices guide](#).

To reply to this reviewer invitation, please click the link below to register with our online manuscript review system, or you may email me with your reply. If you are unable to review at this time, I would appreciate your recommendation for another expert reviewer.

*** PLEASE NOTE: This is a two-step process. After clicking on the link, you will be directed to a webpage to confirm. ***

Agreed: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=b1702edae3574f5a99d1f1116620fda1

Declined: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=92fe988b6ce54795936bc409ce0f6d1f

Once you accept my invitation to review this manuscript, you will be notified via email with directions on how to access the manuscript and the reviewer instructions in the Reviewer Center.

Thank you for your assistance with the peer review of this IEEE Access article.

Sincerely,

Dr. Gerard-Andre Capolino
IEEE Access Associate Editor

TITLE: Attribute-Guided Alignment Model for Person Re-identification with Feature Distillation and Enhancement

AUTHORS: HUANG, RONGNAN; PENG, SIMENG; XIAHOU, YAOTAO; Li, Xiaochao

ABSTRACT: This paper proposes an attribute-guided alignment model for person re-identification with feature distillation and enhancement. The proposed attribute-guided part-level distillation model learns spatial body-part information, enabling the alignment of attribute features with their corresponding body regions. Hence, the localization ability of the

attention mechanism in spatial information is fully exploited to address the feature misalignment issue in ReID tasks. Furthermore, an attribute-guided part-level feature enhancement method is proposed, which re-weights local features by selecting the top-3 most distinctive features for person re-identification during the inference phase. Hence, our method fully utilizes the most distinct local attribute features in both the training and inference stages. Comparison among the attribute attention maps and visualization of body-part maps with or without distillation demonstrate the effectiveness of our model. Experimental results show that the proposed method achieves Rank-1 accuracy and mAP of 95.4%/89.1% on Market-1501 and 88.8%/79.1% on DukeMTMC-ReID.

Per Section 8.2.1.C.4 of the IEEE PSPB Operations Manual, information contained in an article under review is confidential and shall not be shared with others, nor shall reviewers use non-public information contained in an article to advance their own research or financial interests.

Per Section 8.2.2.A.2 of the IEEE PSPB Operations Manual, all editors and referees shall immediately DECLINE from review of articles in which there exists a conflict of interest.

If you have any questions, please contact the article administrator: Dr. Harishankar Tripathi h.tripathi@ieee.org. In addition, if you would like to get a certificate after completing this review, please send an email to ieeeaccess@ieee.org.
