Dear Mr. Khare:

Recently you reviewed an article submitted to IEEE Access entitled, "Using Axiomatic Design and Fuzzy Axiomatic Design for Risk Management in Software Development". Please note that this article was rejected, and the authors were asked to update their article based on the reviewers' concerns.

The authors have resubmitted their revised article and supplied a "list of updates" that highlights all edits made, as well as their responses to the previous reviewers' concerns.

We would appreciate if you could take another look at this improved version to determine if your concerns have been addressed, and to ensure that you are satisfied with the updates.

After completing the review, you can easily receive credit on your Publons profile.

For additional information on IEEE Access and tips on completing a quality review, please visit our [Reviewer Best Practices guide](#).

To reply to this reviewer invitation, please click the link below to register with our online manuscript review system, or you may email me with your reply. If you are unable to review at this time, I would appreciate your recommendation for another expert reviewer.

*** PLEASE NOTE: This is a two-step process. After clicking on the link, you will be directed to a webpage to confirm. ***

Agreed: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=e698bf75eb4e4c0b96ba8c720f659e71

Declined: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=53cd0e3ad8e24de69eead3e1bde3668a

Once you accept my invitation to review this manuscript, you will be notified via email with directions on how to access the manuscript and the reviewer instructions in the Reviewer Center.

Thank you for your assistance with the peer review of this IEEE Access article.

Sincerely,

Dr. Wojciech Salabun
IEEE Access Associate Editor

MANUSCRIPT DETAILS

TYPE: Research Article

TITLE: Using Axiomatic Design and Fuzzy Axiomatic Design for Risk Management in Software Development

AUTHORS: Kepkep, Taner Behçet; Durmusoglu, Alptekin; Dereli, Turkey

ABSTRACT: The software development process is a type of structural approach, also called the software development life cycle, that includes many different steps including planning, requirements analysis, design, implementation, testing, deployment and maintenance, and guides the developer team from start to finish, covering the stages to meet the end

user's needs and quality standards. The choice between agile and traditional software development life cycle (SDLC) methods significantly impacts the software development process, and developers must carefully consider which method to use to achieve a high-quality and sustainable end product. There are numerous SDLC models available and project managers and team members often select a model based on past experience rather than logical and rational decision-making process that can result in negative consequences, including software failures and budget overruns. To address these challenges, we chose to compare method selection between traditional and agile software development methodologies using Axiomatic Design (AD). AD provides a systematic and structured approach that takes into account the independence of functional requirements and allows for an explicit and mathematical evaluation of the properties of alternatives in decision problems. Our paper presents an objective and mathematical roadmap for selecting the appropriate SDLC model based on AD principles.

Per Section 8.2.1.C.4 of the IEEE PSPB Operations Manual, information contained in an article under review is confidential and shall not be shared with others, nor shall reviewers use non-public information contained in an article to advance their own research or financial interests.

Per Section 8.2.2.A.2 of the IEEE PSPB Operations Manual, all editors and referees shall immediately DECLINE from review of articles in which there exists a conflict of interest.

If you have any questions, please contact the article administrator: Ms. Sweta Satapathy s.satapathy@ieee.org. In addition, if you would like to get a certificate after completing this review, please send an email to ieeeaccess@ieee.org.
