Dear Mr. Khare:

The manuscript entitled "Using Axiomatic Design and Fuzzy Axiomatic Design for Risk Management in Software Development" has been submitted to IEEE Access. Since your expertise is relevant to this article, we would be grateful if you would consider reviewing it.

The abstract appears at the end of this letter, along with the names of the authors. Please let me know within 2 days if you will be able to accept my invitation to review. If you agree to review, we ask that you provide your review comments within **7 days** to assist IEEE Access in maintaining its expedited peer review process of 4 to 6 weeks. If you are interested in reviewing but need additional time to complete the review, we can grant a reasonable deadline extension upon request. For additional information on IEEE Access and tips on completing a quality review, please visit our [Reviewer Best Practices guide](#).

After completing the review, you can easily receive credit on your Publons profile.

As a reviewer, you will need to provide an Accept or Reject recommendation with comments.

When reviewing the article, keep in mind the following IEEE Access qualities:

1. The article must be technically sound.
2. The article must be original writing that enhances the existing body of knowledge in the given subject area. However, review articles and surveys are acceptable if they add value, even if new data/concepts are not presented.
3. Applied research articles are acceptable if they are useful to the engineering community on how to demonstrate a technology that may not be novel.
4. The references that are provided must be applicable and sufficient.
5. The title is applicable and appropriate.

To reply to this reviewer invitation, please click the link below to register with our online manuscript review system, or you may email me with your reply. If you are unable to review at this time, I would appreciate your recommendation for another expert reviewer.

*** PLEASE NOTE: This is a two-step process. After clicking on the link, you will be directed to a webpage to confirm. ***

Agreed: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=6136c5f23d624bf4b3a6afc1026fde9d

Declined: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=aa175ffb1c92407d8146b570a1cfeb28

Once you accept my invitation to review this manuscript, you will be notified via email with directions on how to access the manuscript and the reviewer instructions in the Reviewer Center.

Thank you for your assistance with the peer review of this IEEE Access article.

Sincerely,

Prof. Derek Abbott
Editor-in-Chief, IEEE Access

TITLE: Using Axiomatic Design and Fuzzy Axiomatic Design for Risk Management in Software Development

AUTHORS: Kepkep, Taner Behçet; Durmusoglu, Alptekin; Dereli, Turkey

ABSTRACT: The choice between agile and traditional software development process methods significantly impacts the software development process, and developers must carefully consider which method to use to achieve a high-quality and sustainable end product. There are numerous SDLC models available, and project managers and team members often select a model based on past experience rather than a logical and rational decision-making process. This approach can result in negative consequences, including software failures and budget overruns. To address these challenges, we chose to compare method selection between traditional and agile software development methodologies using axiomatic design (AD). Axiomatic design provides a systematic and structured approach that takes into account the independence of functional requirements and allows for an explicit and mathematical evaluation of the properties of alternatives in decision problems. Our paper presents an objective and mathematical roadmap for selecting the appropriate SDLC model based on axiomatic design principles.

Per Section 8.2.1.C.4 of the IEEE PSPB Operations Manual, information contained in an article under review is confidential and shall not be shared with others, nor shall reviewers use non-public information contained in an article to advance their own research or financial interests.

Per Section 8.2.2.A.2 of the IEEE PSPB Operations Manual, all editors and referees shall immediately DECLINE from review of articles in which there exists a conflict of interest.

If you have any questions, please contact the article administrator: Miss Manpreet Kaur m.kaur@ieee.org.

In addition, if you would like to get a certificate after completing this review, please send an email to

ieeeaccess@ieee.org.
