Dear Mr. Khare:

The manuscript entitled "Quantitative DevSecOps Metrics for Cloud-Based Web Microservices" has been submitted to IEEE Access. Since your expertise is relevant to this article, we would be grateful if you would consider reviewing it.

The abstract appears at the end of this letter, along with the names of the authors. Please let me know within 2 days if you will be able to accept my invitation to review. If you agree to review, we ask that you provide your review comments within **7 days** to assist IEEE Access in maintaining its expedited peer review process of 4 to 6 weeks. If you are interested in reviewing but need additional time to complete the review, we can grant a reasonable deadline extension upon request. For additional information on IEEE Access and tips on completing a quality review, please visit our [Reviewer Best Practices guide](#).

After completing the review, you can easily receive credit on your Publons profile.

As a reviewer, you will need to provide an Accept or Reject recommendation with comments.

When reviewing the article, keep in mind the following IEEE Access qualities:

1. The article must be technically sound.
2. The article must be original writing that enhances the existing body of knowledge in the given subject area. However, review articles and surveys are acceptable if they add value, even if new data/concepts are not presented.
3. Applied research articles are acceptable if they are useful to the engineering community on how to demonstrate a technology that may not be novel.
4. The references that are provided must be applicable and sufficient.
5. The title is applicable and appropriate.

To reply to this reviewer invitation, please click the link below to register with our online manuscript review system, or you may email me with your reply. If you are unable to review at this time, I would appreciate your recommendation for another expert reviewer.

*** PLEASE NOTE: This is a two-step process. After clicking on the link, you will be directed to a webpage to confirm. ***

Agreed: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=8604b5ff693a4862b82df57cf96e746e

Declined: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=68e3df1300294b41b80918f13a2228fb

Once you accept my invitation to review this manuscript, you will be notified via email with directions on how to access the manuscript and the reviewer instructions in the Reviewer Center.

Thank you for your assistance with the peer review of this IEEE Access article.

Sincerely,

Prof. Derek Abbott
Editor-in-Chief, IEEE Access

TITLE: Quantitative DevSecOps Metrics for Cloud-Based Web Microservices

AUTHORS: ZHANG, JIN YU; ZHANG, YUTING

ABSTRACT: The widespread adoption of Cloud-Based Web Microservices (CBWMs) and DevSecOps (Development, Security, and Operations) methodologies has significantly improved modern software development, particularly regarding scalability, agility, and security. However, the true success of these implementations hinges on the ability to measure their effectiveness accurately. Metrics serve as a critical tool in this process, providing quantifiable data on service performance, security, and operational efficiency. By leveraging these metrics, organizations can better assess the efficiency of their DevSecOps practices, making them invaluable for informed decision-making, trend analysis, process management, and continuous improvement. This paper introduces 12 key quantitative metrics specifically designed to evaluate the quality of CBWMs developed through DevSecOps practices. These metrics were identified using a Multi-Vocal Literature Review methodology, sourcing information from 92 relevant studies (2018-2023) on IEEE Xplore, Springer, and Google Scholar. The selected metrics are widely applicable across CBWMs and are easy to measure with existing tools, offering a comprehensive framework for thorough assessment.

Per Section 8.2.1.C.4 of the IEEE PSPB Operations Manual, information contained in an article under review is confidential and shall not be shared with others, nor shall reviewers use non-public information contained in an article to advance their own research or financial interests.

Per Section 8.2.2.A.2 of the IEEE PSPB Operations Manual, all editors and referees shall immediately DECLINE from review of articles in which there exists a conflict of interest.

If you have any questions, please contact the article administrator: Mrs. Shilpa Verma shilpa.verma@ieee.org. In addition, if you would like to get a certificate after completing this review, please send an email to ieeeaccess@ieee.org.
