Dear Mr. Khare:

The manuscript entitled "Factors Influencing Software Development Competencies of GSD Teams" has been submitted to IEEE Access. Since your expertise is relevant to this article, we would be grateful if you would consider reviewing it.

The abstract appears at the end of this letter, along with the names of the authors. Please let me know within 2 days if you will be able to accept my invitation to review. If you agree to review, we ask that you provide your review comments within **7 days** to assist IEEE Access in maintaining its expedited peer review process of 4 to 6 weeks. If you are interested in reviewing but need additional time to complete the review, we can grant a reasonable deadline extension upon request. For additional information on IEEE Access and tips on completing a quality review, please visit our [Reviewer Best Practices guide](#).

After completing the review, you can easily receive credit on your Publons profile.

As a reviewer, you will need to provide an Accept or Reject recommendation with comments.

When reviewing the article, keep in mind the following IEEE Access qualities:

1. The article must be technically sound.
2. The article must be original writing that enhances the existing body of knowledge in the given subject area. However, review articles and surveys are acceptable if they add value, even if new data/concepts are not presented.
3. Applied research articles are acceptable if they are useful to the engineering community on how to demonstrate a technology that may not be novel.
4. The references that are provided must be applicable and sufficient.
5. The title is applicable and appropriate.

To reply to this reviewer invitation, please click the link below to register with our online manuscript review system, or you may email me with your reply. If you are unable to review at this time, I would appreciate your recommendation for another expert reviewer.

*** PLEASE NOTE: This is a two-step process. After clicking on the link, you will be directed to a webpage to confirm. ***

Agreed: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=bc143cc9c85a4dddaf34848f5d0fbf32

Declined: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=d516ae9daf8f44a58f7433daab40dfad

Once you accept my invitation to review this manuscript, you will be notified via email with directions on how to access the manuscript and the reviewer instructions in the Reviewer Center.

Thank you for your assistance with the peer review of this IEEE Access article.

Sincerely,

Prof. Derek Abbott
Editor-in-Chief, IEEE Access

MANUSCRIPT DETAILS

TYPE: Research Article

TITLE: Factors Influencing Software Development Competencies of GSD Teams

AUTHORS: KHAN, MAAZ; Ilyas, Dr. Muhammad; Qadah, Thamir; GHAFAR, ABID

ABSTRACT: Global software development (GSD) involves software developers collaborating across cultures, time zones, and organizations. Despite its growing popularity, GSD faces challenges that hinder organizations from realizing its potential benefits. Software development competencies of the GSD team are crucial for successful GSD, but the focus has primarily been on organizational capabilities rather than individual ones. Transitioning from a local software development team to a GSD team brings about contextual changes and presents various challenges for team members. In this study, a systematic literature review (SLR) was conducted to discover the factors that may influence the software development competencies of the GSD team. The SLR was followed by an empirical study using a questionnaire survey to validate the SLR outcomes. The findings of the study are presented in the form of a list of 14 factors extracted from a sample of 57 selected research papers. Among the identified factors, seven are ranked as critical factors. These crucial factors are "Lack of knowledge sharing and mutual trust," "Lack of domain knowledge, experience, and skill," "Lack of informal communication and mutual understanding," "Training and certification," "Cultural diversity," "Multilingualism" and "Complex task division and distribution." The outcomes of the questionnaire survey are coherent with the conclusions drawn from the SLR. The main aim of this study was to improve or maximize the competence level of a software development team in the GSD environment. The factors identified in this research study may serve as valuable guidelines for developers to enhance their competencies and improve their effectiveness when working in a GSD team.

Per Section 8.2.1.C.4 of the IEEE PSPB Operations Manual, information contained in an article under review is confidential and shall not be shared with others, nor shall reviewers use non-public information contained in an article to advance their own research or financial interests.

Per Section 8.2.2.A.2 of the IEEE PSPB Operations Manual, all editors and referees shall immediately DECLINE from review of articles in which there exists a conflict of interest.

If you have any questions, please contact the article administrator: Dr. Harishankar Tripathi h.tripathi@ieee.org. In addition, if you would like to get a certificate after completing this review, please send an email to ieeeaccess@ieee.org.
