Dear Mr. Khare:

Recently you reviewed an article submitted to IEEE Access entitled, "Defining Performance-Shaping Factors in Product Changes: A Systematic Literature Review". Please note that this article was rejected, and the authors were asked to update their article based on the reviewers' concerns.

The authors have resubmitted their revised article and supplied a "list of updates" that highlights all edits made, as well as their responses to the previous reviewers' concerns.

We would appreciate if you could take another look at this improved version to determine if your concerns have been addressed, and to ensure that you are satisfied with the updates.

After completing the review, you can easily receive credit on your Publons profile.

For additional information on IEEE Access and tips on completing a quality review, please visit our [Reviewer Best Practices guide](#).

To reply to this reviewer invitation, please click the link below to register with our online manuscript review system, or you may email me with your reply. If you are unable to review at this time, I would appreciate your recommendation for another expert reviewer.

*** PLEASE NOTE: This is a two-step process. After clicking on the link, you will be directed to a webpage to confirm. ***

Agreed: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=9d218340d2c14c60bfde6d9100a008cf

Declined: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=e913c525fba24ac7af6209964d0df1c3

Once you accept my invitation to review this manuscript, you will be notified via email with directions on how to access the manuscript and the reviewer instructions in the Reviewer Center.

Thank you for your assistance with the peer review of this IEEE Access article.

Sincerely,

Prof. Genoveffa Tortora
IEEE Access Associate Editor

TITLE: Defining Performance-Shaping Factors in Product Changes: A Systematic Literature Review

AUTHORS: Mordaschew, Viktoria; Latos, Benedikt

ABSTRACT: Product changes depend highly on product developers' reliability since errors cause rework and increasing costs. To increase the reliability of product developers in product changes, a forecasting model is required that enables companies to predict the reliability of developers prospectively based on individual real-time data. However, the

performance-shaping factors (PSFs) must first be identified to develop such a model. Consequently, there is a need to understand which factors influence and affect their reliability in product changes. Therefore, this article presents relevant PSFs and a categorization for them regarding the work system of engineering change process. The PSFs are retrieved from literature based on a systematic literature review. Overall, 18 PSFs were identified, which have an effect on product developers. Further, the current research gap is identified from the literature and current gaps are presented. The relations between PSFs and how they affect each other are currently not analyzed in literature.

Per Section 8.2.1.C.4 of the IEEE PSPB Operations Manual, information contained in an article under review is confidential and shall not be shared with others, nor shall reviewers use non-public information contained in an article to advance their own research or financial interests.

Per Section 8.2.2.A.2 of the IEEE PSPB Operations Manual, all editors and referees shall immediately DECLINE from review of articles in which there exists a conflict of interest.

If you have any questions, please contact the article administrator: Ms. Ritika Gupta ritika.gupta@ieee.org. In addition, if you would like to get a certificate after completing this review, please send an email to ieeeaccess@ieee.org.
