Dear Mr. Khare:

The manuscript entitled "Crowdsourcing Software Developer Recommendation based on deep neural networks" has been submitted to IEEE Access. Since your expertise is relevant to this article, we would be grateful if you would consider reviewing it.

The abstract appears at the end of this letter, along with the names of the authors. Please let me know within 2 days if you will be able to accept my invitation to review. If you agree to review, we ask that you provide your review comments within **7 days** to assist IEEE Access in maintaining its expedited peer review process of 4 to 6 weeks. If you are interested in reviewing but need additional time to complete the review, we can grant a reasonable deadline extension upon request. For additional information on IEEE Access and tips on completing a quality review, please visit our [Reviewer Best Practices guide](#).

After completing the review, you can easily receive credit on your Publons profile.

As a reviewer, you will need to provide an Accept or Reject recommendation with comments.

When reviewing the article, keep in mind the following IEEE Access qualities:

1. The article must be technically sound.
2. The article must be original writing that enhances the existing body of knowledge in the given subject area. However, review articles and surveys are acceptable if they add value, even if new data/concepts are not presented.
3. Applied research articles are acceptable if they are useful to the engineering community on how to demonstrate a technology that may not be novel.
4. The references that are provided must be applicable and sufficient.
5. The title is applicable and appropriate.

To reply to this reviewer invitation, please click the link below to register with our online manuscript review system, or you may email me with your reply. If you are unable to review at this time, I would appreciate your recommendation for another expert reviewer.

*** PLEASE NOTE: This is a two-step process. After clicking on the link, you will be directed to a webpage to confirm. ***

Agreed: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=9519c24becc24534a3aab724293fed84

Declined: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=963a976defc04786bc63aaaff0fb13c5

Once you accept my invitation to review this manuscript, you will be notified via email with directions on how to access the manuscript and the reviewer instructions in the Reviewer Center.

Thank you for your assistance with the peer review of this IEEE Access article.

Sincerely,

Prof. Derek Abbott
Editor-in-Chief, IEEE Access

MANUSCRIPT DETAILS

TYPE: Research Article

TITLE: Crowdsourcing Software Developer Recommendation based on deep neural networks

AUTHORS: Wang, Hongbing; Xue, Chan

ABSTRACT: With the rapid development of information technology and the software industry, crowdsourcing software development has gradually become a research hotspot. This development schema can make full use of the wisdom of the crowds to complete the task more efficiently and with a high level of quality. However, due to the large number of tasks on the crowdsourcing platform which have different needs, a lot of time can be wasted waiting for developers to participate. In addition, the ability of task participants is not guaranteed, resulting in the quality of software products being unstable. Based on the above problems, this paper proposes a crowdsourcing software developer recommendation method based on deep learning. Firstly, considering the task features, a multi-label prediction algorithm based on the attention mechanism and deep neural networks is proposed to predict which developers may be interested in participating in the task. Then, combining the features of tasks and developers, a developer task score prediction algorithm based on deep neural networks and the attention mechanism is proposed to further evaluate the score of developers, and recommend developers with the top-K score for the task. Finally, a series of experiments are conducted to verify the effectiveness of the proposed model. The experiment results show that the model has significant advantages in crowdsourcing software developer recommendation.

Per Section 8.2.1.C.4 of the IEEE PSPB Operations Manual, information contained in an article under review is confidential and shall not be shared with others, nor shall reviewers use non-public information contained in an article to advance their own research or financial interests.

Per Section 8.2.2.A.2 of the IEEE PSPB Operations Manual, all editors and referees shall immediately DECLINE from review of articles in which there exists a conflict of interest.

If you have any questions, please contact the article administrator: Dr. Dharmendra Sharma
