Dear Mr. Khare:

The manuscript entitled "What is happening in product obsolescence management? – Three decades review from 1993 to 2023" has been submitted to IEEE Access. Since your expertise is relevant to this article, we would be grateful if you would consider reviewing it.

The abstract appears at the end of this letter, along with the names of the authors. Please let me know within 2 days if you will be able to accept my invitation to review. If you agree to review, we ask that you provide your review comments within **7 days** to assist IEEE Access in maintaining its expedited peer review process of 4 to 6 weeks. If you are interested in reviewing but need additional time to complete the review, we can grant a reasonable deadline extension upon request. For additional information on IEEE Access and tips on completing a quality review, please visit our [Reviewer Best Practices guide](#).

After completing the review, you can easily receive credit on your Publons profile.

As a reviewer, you will need to provide an Accept or Reject recommendation with comments.

When reviewing the article, keep in mind the following IEEE Access qualities:

1. The article must be technically sound.
2. The article must be original writing that enhances the existing body of knowledge in the given subject area. However, review articles and surveys are acceptable if they add value, even if new data/concepts are not presented.
3. Applied research articles are acceptable if they are useful to the engineering community on how to demonstrate a technology that may not be novel.
4. The references that are provided must be applicable and sufficient.
5. The title is applicable and appropriate.

To reply to this reviewer invitation, please click the link below to register with our online manuscript review system, or you may email me with your reply. If you are unable to review at this time, I would appreciate your recommendation for another expert reviewer.

*** PLEASE NOTE: This is a two-step process. After clicking on the link, you will be directed to a webpage to confirm. ***

Agreed: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=1f6209695b444fad94a0c2a0c57e16c1

Declined: https://mc.manuscriptcentral.com/ieee-access?URL_MASK=6c433dbb860d47aca7584f2ef5724aa2

Once you accept my invitation to review this manuscript, you will be notified via email with directions on how to access the manuscript and the reviewer instructions in the Reviewer Center.

Thank you for your assistance with the peer review of this IEEE Access article.

Sincerely,

Prof. Derek Abbott

Editor-in-Chief, IEEE Access

TITLE: What is happening in product obsolescence management? – Three decades review from 1993 to 2023

AUTHORS: Liu, Yan; Zolghadri, M.

ABSTRACT: All products are likely to be influenced by obsolescence. The consequences can be serious since an obsolete part or component could raise issues in terms of cost, nashiproduction, safety, and maintenance. To minimize the impact, strategies must be implemented throughout the product's intended life, such as upgrades, monitoring, and forecasting. This research reviews 188 papers on product obsolescence management published in the past three decades to understand the proposed strategies. Two research questions are addressed: (1) what is the academic landscape of product obsolescence management? (2) what are the main research topics and how are these topics covered by the literature? A bibliometric analysis is firstly conducted to comprehend the distribution of these papers, identify productive authors, and highlight frequent keywords. These papers are then analyzed under seven topics, i.e., general management, upgrade and replacement, mitigation, monitoring, forecasting, design refresh and strategy, and obsolescence impacts. This research fills the gap of lacking an up-to-date overview of works in product obsolescence management, providing insights to enhance the understanding and advancement in the field. The literature review reveals that existing studies address a range of products, with attention to software obsolescence. Cost, as a critical factor, drives various cost model-based management strategies. The studies also highlight the need to consider multiple key aspects when implementing these strategies. However, limited research has explored how to identify the most appropriate approach or action, and further studies are needed to provide systematic guidance for implementing obsolescence management strategies.

Per Section 8.2.1.C.4 of the IEEE PSPB Operations Manual, information contained in an article under review is confidential and shall not be shared with others, nor shall reviewers use non-public information contained in an article to advance their own research or financial interests.

Per Section 8.2.2.A.2 of the IEEE PSPB Operations Manual, all editors and referees shall immediately DECLINE from review of articles in which there exists a conflict of interest.

If you have any questions, please contact the article administrator: Ms. Namrata Sinha sinha.n@ieee.org.
In addition, if you would like to get a certificate after completing this review, please send an email to ieeeaccess@ieee.org.
