RE: EB-1A Alien of Extraordinary Ability Immigrant Petition for Mr. Srimaan Yarram

Dear Sir or Madam:

This letter is submitted in support of the EB-1A immigrant petition for Mr. Srimaan Yarram (“**Petitioner**”). The Petitioner is an Alien of Extraordinary Ability.

In this petition, we submit probative evidence to demonstrate by a preponderance of the evidence that the Petitioner is an expert in the field of **Software Engineering, specializing in Artificial Intelligence (AI) for Compliance.**

The evidence demonstrates that the Petitioner has established a proven record as a leader in this field and meets at least three (3) regulatory criteria to qualify for EB-1A classification. In addition, in accordance with the final merits determination under *Kazarian*, the aggregated evidence establishes that the Petitioner has achieved a sustained international reputation as a top leader in the field.

I. THE FIELD: SOFTWARE ENGINEERING, SPECIALIZING IN ARTIFICIAL INTELLIGENCE (AI) FOR COMPLIANCE

Software Engineering is a critical discipline within the technology sector focused on the systematic design, development, testing, deployment, and maintenance of software systems. It applies engineering principles and methodologies to create scalable, reliable, and efficient solutions that meet user needs and industry standards. The field emphasizes structured processes such as Agile, DevOps, and continuous integration/continuous delivery (CI/CD) to manage complexity, ensure quality, and adapt to evolving requirements. Software engineers leverage programming languages, frameworks, and tools to build applications spanning industries like healthcare, finance, and telecommunications. As technology advances, the discipline increasingly integrates emerging areas such as cloud computing, cybersecurity, and artificial intelligence (AI), positioning it at the forefront of innovation in the digital age.

Artificial Intelligence (AI) is a transformative branch of computer science dedicated to creating systems capable of performing tasks that traditionally require human intelligence, such as learning, reasoning, and decision-making. By utilizing techniques like machine learning, neural networks, and

natural language processing (NLP), AI enables machines to analyze vast datasets, recognize patterns, and adapt to new information autonomously. Applications range from predictive analytics and autonomous systems to intelligent automation and personalized user experiences. The rapid growth of AI has revolutionized industries, driving advancements in healthcare diagnostics, financial forecasting, and smart manufacturing. Ethical considerations, including transparency, fairness, and accountability, remain central to AI development, ensuring its alignment with societal values and regulatory standards.

The integration of software engineering and AI has profoundly enhanced compliance processes, enabling organizations to meet legal, regulatory, and ethical obligations with unprecedented precision. AI-driven compliance tools automate the monitoring of transactions, communications, and operational workflows in real time, identifying anomalies, flagging risks, and predicting potential violations. Machine learning models analyze historical data to detect fraudulent activities or non-compliant behavior, while NLP algorithms parse complex regulatory texts to ensure adherence to evolving laws. These systems reduce human error, accelerate audits, and provide auditable trails for accountability. In sectors like finance, healthcare, and data privacy, AI-powered compliance solutions address stringent requirements such as anti-money laundering (AML), HIPAA, and GDPR. By combining software engineering rigor with AI's adaptability, organizations achieve scalable, dynamic compliance frameworks capable of navigating global regulatory landscapes efficiently.

II. ABOUT THE PETITIONER

The Petitioner is a globally recognized expert in **Software Engineering**, with a specialization in **Artificial Intelligence (AI) for Compliance**. With over 19 years of experience across enterprise platforms, fintech infrastructure, and regulatory technology, he has held senior roles at **Coupa Software, Goto (LogMeIn), LendingClub, and Pegasystems**. He currently serves as **Senior Manager – Quality Engineering** at Coupa, a global leader in AI-powered Business Spend Management. At Coupa, he led the development of mission-critical automation systems for Fortune 500 companies such as **Deutsche Bank, Johnson & Johnson, Visa, Bank of Montreal** and **Accenture**, eliminating 80% of manual testing, improving execution speed by 30%, and contributing to a 15% revenue increase for Coupa's Risk Assess product line.

Mr. Yarram's work has resulted in widely adopted frameworks such as the **Load Test Environment (LTE)** and the **P2P Upgrade Lab**, which have been implemented by institutions including **Navy Federal Credit Union, American Express, Cognizant** and **Virtusa** to modernize compliance systems and ensure audit resilience. His original contributions include real-time anomaly detection pipelines, synthetic data generation for privacy-safe performance testing, and predictive validation systems for AI-driven compliance platforms. He has authored over **10+ peer-reviewed publications** in IEEE and Springer venues, judged international AI and cybersecurity competitions, including **NIST's AI Standards Pilot**, and served as a peer reviewer for IEEE conferences and journals. His critical role in shaping AI policy is reflected in his work with the **IEEE Artificial Intelligence Policy Committee (AIPC)**, where he contributed to national-level position statements on ethical AI governance. Mr. Yarram was actively involved in AIPC's evaluation of two major bipartisan legislative efforts: The VET Artificial Intelligence Act and the American Science Acceleration Project AI Initiative. His feedback on these draft bills contributed to IEEE-USA's formal policy positions submitted to congressional staff.

A respected mentor and team leader, the Petitioner manages a global engineering team and leads organizational initiatives that institutionalize innovation, including Coupa's **Hackday** and **QE Tech Days**. Mr. Yarram has been invited to serve as a Judge for prestigious Hackathons, including **HackDavis Hackathon 2025**, which is recognized among the **top 50 hackathons in the world**, and the Hackathon Raptors Signature Hackathon. He is, among others, a **Senior Member of IEEE**, a **Full Member of Sigma Xi**, a Fellow of Hackathon Raptors, and has served as a Ph.D. thesis evaluator at Visvesvaraya Technological University. His research is integrated into academic curricula and has influenced software reliability practices across regulated sectors. By advancing intelligent compliance systems, mentoring future engineering talent, and promoting ethical, scalable AI solutions, Mr. Yarram's continued presence in the United States directly supports national objectives in **economic resilience, digital trust, and AI leadership**.

III. THE PETITIONER'S PROPOSED WORK IN THE U.S.

The Petitioner will continue his professional endeavors in the United States, leveraging his extraordinary abilities in AI-driven platform engineering, compliance automation, and fintech resilience. With over 19 years of pioneering experience in fintech and regulatory technology, his proposed work aligns directly with U.S. priorities in AI leadership, financial innovation, and sustained economic growth.

The Petitioner will design intelligent platforms that empower enterprises to navigate complex, evolving regulations such as the General Data Protection Regulation (GDPR), Anti-Money Laundering (AML), Service Organization Control 2 (SOC2), Digital Operational Resilience Act (DORA), and Environmental, Social, and Governance (ESG). By **automating compliance processes** across supplier and financial ecosystems, these systems will enhance operational adaptability and efficiency while reducing legal exposure. **This initiative directly supports key national priorities, aligning with Executive Order 14179 (promoting AI innovation), Executive Order 14017 (supply chain security), Executive Order 14028 (cybersecurity), and Executive Order 13985 (digital equity)**. By embedding compliance-aware AI into enterprise ecosystems, the Petitioner's work will foster secure, inclusive, and regulation-ready operations, reinforcing U.S. competitiveness and technological leadership.

Building on his expertise in software engineering, AI-driven systems, predictive analytics, and software reliability, **the Petitioner will develop advanced transaction platforms capable of detecting risk patterns, mitigating operational disruptions, and streamlining regulatory audits**. The Petitioner will lead innovation in risk validation and system resilience by integrating AI-powered anomaly detection and intelligent failure prediction. To ensure responsible and secure AI deployment, the Petitioner will embed compliance-aware mechanisms into enterprise architectures, enabling scalable, ethics-aligned solutions across regulated industries.

By prioritizing ethical frameworks and transparency, the Petitioners' work supports the United States' emphasis on developing AI systems free from ideological bias, thereby fostering trust and reliability in critical financial and operational systems. **The Petitioner will cultivate and lead global teams** dedicated to delivering impactful AI solutions in fintech, supply chain, and other compliance-based industries. **By promoting a culture of innovation, ethics-driven engineering, and technical excellence,**

he will empower the next generation of engineers and managers, creating a multiplier effect that strengthens the U.S. workforce and sustains leadership in emerging technologies.

The Petitioner's AI-powered platforms will directly enhance financial and operational infrastructures by supporting industries that manage over \$100 billion in global spend, delivering measurable benefits to U.S. companies, minimizing regulatory penalties, operational risk, and reputation damage, and contributing to a business-friendly, innovation-driven environment. The urgent need for scalable compliance solutions is underscored by recent enforcement actions, including the €1.3 billion GDPR fine against Meta, a \$1.9 billion AML settlement involving HSBC, and the \$3.7 billion penalty levied against Wells Fargo. These cases highlight the consequences of inadequate compliance infrastructure. (See **Exhibit I-10**, Regulatory Failures, demonstrating the Need for AI-Powered Compliance Platforms.)

Drawing on extensive technical leadership, the Petitioner has developed platforms that proactively address enterprise compliance challenges by automating third-party and financial risk assessments, enabling continuous compliance monitoring, and facilitating timely regulatory reporting. These solutions have delivered measurable improvements in regulatory responsiveness, operational transparency, and enterprise-wide compliance assurance. **The Petitioner's continued innovation in this field, grounded in demonstrated technical expertise, reflects a sustained capacity to develop transformative solutions in compliance automation and enterprise AI.** This work will contribute to economic resilience and strengthen U.S. leadership in regulatory intelligence and digital risk governance.

The Petitioner's proposed work in the United States will yield transformative advancements in AI, compliance automation, software reliability, and fintech resilience. By developing scalable solutions that align with Executive Orders on AI innovation, supply chain security, cybersecurity, digital equity, and financial oversight, the Petitioner's contributions will bolster national competitiveness, economic stability, and digital security. Through leadership in technology and mentorship, he will further solidify the United States' position as a global leader in ethical AI and regulatory technology, driving long-term growth and safeguarding critical systems that underpin American prosperity.

IV. EB-1A ELIGIBILITY CRITERIA

The Petitioner is an internationally recognized leader in the field of Software Engineering, specializing in AI for Compliance. Please see **Exhibit A-1** for the Petitioner's Resume. The Petitioner qualifies as an EB-1A Alien of Extraordinary Ability, based on meeting the following criteria:

1) Original Contributions of Major Significance in the Field

The Petitioner's professional accomplishments reflect extraordinary original contributions to the field of Software Engineering, specializing in AI for Compliance across industry-leading organizations such as Coupa Software and Pegasystems. With over 19 years of experience in the field, the Petitioner has played a pivotal role in building and delivering enterprise-grade software solutions used by Fortune 500 companies. He has designed novel automation frameworks, enterprise-grade architectures, and scalable solutions that enable operational continuity, regulatory compliance, and national-level

economic resilience. His work spans across core sectors such as supply chain risk, cloud infrastructure, and government digital modernization, directly aligning with U.S. federal priorities on cybersecurity, financial transparency, and critical infrastructure reliability. His contributions are not merely incremental improvements but foundational innovations that have reshaped how enterprises achieve compliance, mitigate risk, and ensure operational resilience at scale.

a) Architected AI-driven Compliance Automation Frameworks at Coupa Software Inc.

At the forefront of the Petitioner's impact is his leadership in quality and compliance automation efforts for **the Coupa Third-Party Risk Assessment (CRA) platform**, where he ensured that the software met stringent U.S. compliance standards.

The Coupa Risk Assess (CRA) is an enterprise-grade risk management and assessment platform that enables organizations to comprehensively evaluate and monitor third-party vendor risks across their supply chains. The platform leverages **advanced analytics, automated risk scoring algorithms, and real-time data integration** to provide continuous risk monitoring, compliance tracking, and comprehensive due diligence capabilities. **CRA serves Fortune 500 companies and large enterprises** by delivering critical insights into financial stability, operational risks, regulatory compliance, and security vulnerabilities of suppliers and business partners. The platform's sophisticated risk assessment framework and predictive analytics capabilities have established it as **a leading solution in the enterprise risk management sector**, helping organizations make informed decisions while maintaining resilience and regulatory compliance.

Under the Petitioner's direction, the CRA platform reduced compliance validation and assessment cycles by 75% for clients, directly contributing to a 15% year-over-year revenue surge for Coupa's Risk Assess product. Such outcomes underscore the tangible, large-scale economic impact of his work, safeguarding billions in revenue for clients while ensuring CRA product adherence to critical regulations such as the General Data Protection Regulation (GDPR), **Cybersecurity laws, Digital Operational Resilience Act (DORA)**, and other compliance frameworks such as the ESG mandates. His work also involved validating adherence to, thereby mitigating risks for enterprise customers. Given the sensitivity of third-party risk management, even minor compliance oversights can expose organizations to **regulatory scrutiny, financial penalties, and reputational damage.**

Moreover, by architecting end-to-end automation frameworks for UI, mobile, and API testing, **the Petitioner eliminated 80% of manual testing efforts while accelerating test execution by 30%**, a feat achieved through the integration of cutting-edge tools like PACT for contract testing and Gatling for performance validation. These innovations transcended technical optimization; they transformed quality assurance into a strategic asset, **enabling enterprise customers such as Deutsche Bank, Accenture, Visa, FlagStar, Synk and the Bank of Montreal** to achieve unprecedented efficiency in compliance workflows.

The Petitioner's contributions extend beyond technical execution to shaping the evolution of compliance systems in alignment with U.S. strategic priorities. His frameworks for AI-driven compliance automation directly advance objectives outlined in Executive Orders 14017, and 14028, which correspond

to supply chain resilience, cybersecurity, and AI governance, respectively, ensuring that critical infrastructure sectors such as banking, energy, healthcare, and government maintain secure, auditable, and resilient digital ecosystems. To elucidate, **the Petitioner's integration of compliance validation into CI/CD pipelines has enabled clients like Bank of Montreal to mitigate risks associated with third-party lending and financial reporting**, directly supporting fintech innovation while adhering to **Anti-Money Laundering (AML) and Sarbanes-Oxley (SOX) requirements**. By modernizing legacy platforms and institutionalizing scalable testing methodologies, the Petitioner has fortified systems responsible for national-level operational continuity, aligning private-sector innovation with public-sector imperatives.

The major significance of the Petitioner's work is further evidenced by its industry-wide adoption and recognition. **The Coupa Risk Assessment (CRA) Platform has become a linchpin for Fortune 500 companies and regulated entities managing third-party risk and regulatory adherence across sectors such as banking, energy, and healthcare.** Furthermore, the Petitioner's frameworks have become benchmarks for compliance automation, re-used across engineering teams, and lauded by clients as critical enablers of business continuity. **Independent analyst firms such as IDC, Forrester, and Gartner have highlighted Coupa's Risk Assess platform as a market leader**, a distinction rooted in the robustness of the compliance infrastructure that the Petitioner architected. Furthermore, the Petitioner's cultivation of a culture of innovation, through initiatives like **Hackday** and **QE Tech Days**, has institutionalized continuous improvement within Coupa, ensuring that his methodologies inspire future advancements.

In sum, the Petitioner's original contributions have redefined the intersection of AI, compliance, and software reliability, generating measurable economic value, safeguarding global supply chains, and advancing U.S. leadership in secure digital infrastructure. His work has not only propelled technological excellence but also fortified systems vital to national competitiveness and security.

b) Pioneered a Privacy-Compliant Load Test Environment (LTE) for Deutsche Bank towards its CRA Platform

The Petitioner's groundbreaking work in designing and implementing the Load Test Environment (LTE) for Deutsche Bank towards its implementation of the Coupa Risk Assess (CRA) Platform represents an original contribution of major significance in the field of enterprise software engineering, particularly in addressing performance scalability challenges for highly regulated, large-scale financial systems. At the core of this achievement was the Petitioner's resolution of a critical bottleneck threatening Deutsche Bank's ability to onboard over 40,000 third-party suppliers, which is a project with systemic implications for compliance, operational efficiency, and risk management.

Prior to the Petitioner's innovation, Coupa lacked a viable mechanism to validate CRA's performance at production scale while adhering to stringent data privacy regulations. This gap exposed enterprise clients like Deutsche Bank to substantial risks, including system slowdowns, missed regulatory deadlines under GDPR, DORA, and System and Organization Controls 2 (SOC2), and delayed supplier onboarding, which could disrupt **billions of euros** in annual procurement transactions. **The Petitioner's**

LTE framework not only resolved these challenges but also established a novel paradigm for load testing in multi-tenant cloud environments, setting a precedent for the industry.

The originality of the Petitioner's contribution lies in the LTE's technical architecture, which pioneered a method to mirror production configurations without exposing personally identifiable information (PII). By devising a synthetic data generation strategy and tenant-aware benchmarking tools, **the Petitioner enabled realistic performance testing at a scale equivalent to millions of annual transactions,** a feat previously unattainable due to PII constraints. This innovation circumvented the limitations of underpowered test environments and eliminated the reliance on scrubbed production data, which had historically delayed release cycles.

Furthermore, the Petitioner integrated the LTE into Coupa's release validation pipeline, allowing performance regressions to be identified and remediated early, which is a transformative shift from reactive problem-solving to proactive risk mitigation. The framework's incorporation of AI-driven techniques, such as anomaly detection and load pattern forecasting, further distinguished it as a forward-thinking solution, optimizing test prioritization and resource allocation to adapt dynamically to evolving scalability demands.

The impact of the Petitioner's work is underscored by its immediate and tangible outcomes for Deutsche Bank, a global financial institution subject to some of the world's most rigorous regulatory frameworks. Post-implementation, the LTE ensured zero performance regressions across five major CRA releases, directly safeguarding Deutsche Bank's capacity to onboard over **40,000 suppliers** and **hundreds of thousands of users** without compromising system stability. This success translated into the avoidance of potential regulatory penalties, preservation of Deutsche Bank's operational timelines, and protection of its reputation in handling high-stakes compliance workflows. The LTE became a foundational tool for Coupa, reused across CRA tenants to validate scalability for other enterprise clients, thereby amplifying its significance across the sector. **The Petitioner's work has thus redefined industry standards for load testing in privacy-sensitive environments,** demonstrating a rare blend of technical ingenuity and strategic foresight that continues to influence best practices in cloud-based compliance systems.

In summary, the Petitioner's LTE framework constitutes a seminal advancement in scalable software engineering, resolving a critical challenge for a globally significant financial institution while establishing a model for performance validation in regulated industries. By merging technical innovation with compliance rigor and AI-enhanced analytics, **the Petitioner's contributions have not only achieved immediate commercial success but have also elevated the technological capabilities of an entire sector,** fulfilling the EB-1A standard for original contributions of major significance.

Priya Gopinath, Vice President of Product Development & Quality Engineering at Coupa Software, says:

Mr. Yarram's contributions to CRA and RTS, particularly in developing intelligent compliance automation frameworks and enhancing platform reliability, have been both innovative and

transformative. His work has directly influenced key product outcomes, accelerated delivery timelines, and elevated our platform's ability to meet stringent regulatory requirements.

Among his most impactful contributions is the design and implementation of Coupa's Load Test Environment (LTE) framework, a privacy-safe, tenant-aware system that enables realistic performance validation at production scale without exposing sensitive data. The LTE framework is now adopted across Coupa's CRA performance engineering pipeline and serves as a reusable enterprise standard. It is currently undergoing validation by several large financial institutions and other compliance-focused clients, and is widely recognized internally as a best practice for performance and compliance assurance (emphasis added).

c) Developed Industry-Standard Frameworks for Pega Platform Upgrades at Pegasystems Inc.

The Petitioner's work at Pegasystems, a global pioneer in business process automation, exemplifies groundbreaking innovation that transcends conventional technical execution, directly addressing systemic challenges in regulatory compliance, operational security, and digital transformation. Pegasystems Inc. is a globally recognized leader in enterprise software solutions, renowned for its innovative customer engagement and digital process automation platforms. Founded in 1983 and publicly traded on NASDAQ, Pegasystems has established itself as a Fortune 1000 company serving over 3,000 enterprise clients worldwide, including more than half of the Fortune 100 companies. The company is distinguished for its cutting-edge artificial intelligence and machine learning capabilities, particularly in customer relationship management (CRM) and business process management (BPM) solutions. Pegasystems has consistently received industry recognition from leading analysts such as Gartner, Forrester, and IDC, and maintains strategic partnerships with major technology companies including Amazon Web Services, Microsoft, and Google Cloud.

The Petitioner's contributions at Pegasystems have not only propelled the success of high-profile clients but have also established frameworks adopted as benchmarks across industries, underscoring their transformative significance. **Central to the Petitioner's impactful contributions is his leadership in architecting Pegasystems' platform modernization strategy,** a critical undertaking given the escalating complexity of regulatory demands and cybersecurity threats. Recognizing the risks inherent in enterprise-scale upgrades, **the Petitioner authored the Pega 7 Upgrade Guide, a comprehensive resource that systematized the migration process for mission-critical applications.** This guide introduced an original framework that prioritized risk mitigation, automated testing protocols, and regulatory resilience. **Its adoption by Pegasystems' internal teams and global partners like Cognizant and Virtusa transformed it into an industry reference standard,** enabling organizations to modernize legacy systems without compromising compliance or operational continuity.

Furthermore, **the Petitioner led enterprise-wide upgrade initiatives for high-profile clients at Pegasystems, including landmark projects for American Express and Con Edison,** which operate in highly regulated sectors where system reliability is non-negotiable. For American Express's GEM platform, the **Petitioner spearheaded the migration from Pega 5.5 to 7.1.5,** ensuring seamless support for secure financial transactions at a global scale. Similarly, **his upgrade of Con Edison's CPMS platform from Pega 6.2 to 7.1.6** safeguarded the utility's ability to deliver regulated services while

integrating advanced automation. These initiatives were not isolated technical feats but rather blueprints for enterprise agility, setting precedents for how regulated industries navigate technological evolution.

The far-reaching impact of the Petitioner's contributions was amplified by his role as a thought leader. At the **2014 Pega Developers Conference (PDC)**, he presented the **P2P Upgrade Lab**, an automated testing environment that he designed, **to an audience of over 3,000 developers and solution architects**. This presentation disseminated his methodologies to a global audience, catalyzing the adoption of his upgrade framework beyond Pegasystems' ecosystem. The lab's integration of compatibility testing and regulatory validation became a reference architecture, empowering organizations to preemptively address upgrade risks. By openly sharing these innovations, the Petitioner elevated industry-wide capabilities, enabling peers to replicate his success in diverse contexts. **The P2P Upgrade Lab that he designed is used by clients such as Navy Federal Credit Union**, one of the largest credit unions in the United States.

In sum, the Petitioner's contributions represent a paradigm shift in enterprise software modernization, characterized by the creation of frameworks that have become institutional knowledge within Pegasystems and its partner network. His work has demonstrably influenced the field by establishing best practices for risk-aware upgrades, fostering industry-wide collaboration, and safeguarding systems integral to global financial and utility services, which are critical infrastructure. **These achievements are underscored by their adoption as reference standards and their validation through high-stakes deployment for industry-leading clients.** His innovations continue to underpin the digital agility of regulated enterprises, cementing his status as a leader whose work has undoubtedly advanced the field.

As **Tom Gardam**, AVP of Low Code Platform Solutions at SoftServe, testifies in his letter:

*Mr. Yarram's role at Pegasystems was instrumental in advancing the vision and goals of the Enterprise Customer Success team. **His most significant contribution was helping design and implement the P2P Upgrade Lab, an automated Pega platform Upgrade and test environment that revolutionized platform modernization for clients in highly regulated industries.** The lab also allowed Pega's flagship customers to try out new product capability on their own applications months before they were adopted in house, and their feedback provided critical information to Pega's product development teams.*

*Mr. Yarram's thought leadership was further recognized when **he led and presented the Pega 7 Upgrade Lab at the 2014 Pega Developers Conference (PDC) in Hyderabad, India, a flagship event attended by over 3,000 global developers and architects.** At his dedicated booth, he demonstrated how the Pega Upgrade Lab, an automated upgrade and validation framework, solved critical challenges such as rule resolution errors, complex customizations, compatibility issues, and post-upgrade regressions.*

*Additionally, **Mr Yarram authored the Pega 7 Upgrade Guide, a seminal resource that systematized migration processes for enterprise clients.** This guide became an internal standard at Pegasystems for upgrades and was adopted by strategic partners such as Cognizant, enabling Fortune 500 firms to modernize legacy systems while meeting stringent regulatory mandates. **His***

work directly influenced Pegasystems standing as a compliance-driven digital process automation leader, setting benchmarks in the modernization of enterprise platforms (emphasis added).

As **Nagaraju Dasari**, Principal Engineer at Navy Federal Credit Union, states in his letter:

*The P2P Upgrade Lab provided a practical and repeatable approach to modernizing legacy Pega platforms, addressing common upgrade challenges more efficiently. By automating compatibility validation, post-upgrade Pega rule engine integrity, and proactively addressing regulatory compliance risks, **Mr. Yarram's framework eliminated months of manual effort and significantly reduced downtime for mission-critical systems.** I leveraged this framework extensively during my roles at Virtusa, Wells Fargo, and American Express to modernize Pega platforms in regulated environments. **At Navy Federal Credit Union, we have used it to support seamless Pega version transitions while ensuring compliance with strict industry standards.** Mr. Yarram's contribution has played a key role in enhancing our operational resilience during upgrade cycles* (emphasis added).

For evidence, please see:

- **Exhibit C-1** for a statement from **Priya Gopinath**, attesting to the Petitioner's original contributions and Critical Role at Coupa Software Inc.
- **Exhibit C-2** for a statement from **Tom Gardam**, attesting to the Petitioner's original contribution and Critical Role at Pegasystems.
- **Exhibit C-3** for a statement from **Nagaraju Dasari**, attesting to the Petitioner's original contribution and Critical Role at Pegasystems.
- **Exhibit C-4** for documents evidencing the Petitioner's critical contributions towards the Coupa Risk Assess (CRA) Platform.
- **Exhibit C-5** for documentation evidencing the Petitioner's critical contributions towards Deutsch Bank for its CRA platform.
- **Exhibit C-6** for additional documents evidencing the Petitioner's critical contributions at Coupa Software Inc.
- **Exhibit C-7** for evidence of the major significance of the Petitioner's contributions at Coupa Software Inc.
- **Exhibit C-8** for evidence of the Petitioner's critical contributions at Pegasystems.
- **Exhibit C-9** for evidence of the major significance of the Petitioner's contributions at Pegasystems.

We accordingly demonstrate that the Petitioner has made original contributions of major significance to the field.

2) Leading or Critical Role for Organizations with a Distinguished Reputation

The Petitioner has **nearly 19 years of professional work experience in the field**, during which he played **critical roles** in driving innovation and operational excellence at **globally distinguished**

organizations, including Coupa Software Inc., LogMeIn Inc., LendingClub Corporation, PegaSystems, Inc and Yahoo!.

The Petitioner has a demonstrated track record of designing and implementing automation frameworks for mission-critical systems. These frameworks, leveraging several technologies, significantly improved testing efficiency and reduced manual effort. The Petitioner's roles have been defined by a commitment to ensuring Quality in complex enterprise platforms. His leadership skills include **leading high-performance software development, testing, and QE teams** while collaborating with cross-functional teams **across the globe**, ensuring innovative solutions and uncompromising quality. Of particular note:

a) Senior Manager, Quality Engineering at Coupa Software Inc.

The Petitioner has demonstrated a sustained leading and critical role at Coupa Software Inc., a globally recognized enterprise renowned for its cutting-edge compliance and risk management solutions. **As the Senior Manager, Quality Engineering, he occupies a pivotal position in shaping the technological and strategic trajectory of Coupa's flagship products**, particularly the Coupa Compliance Risk Assess (CRA) platform. His contributions have not only fortified Coupa's reputation as an industry leader but have also directly influenced its market dominance in the highly regulated financial sector, **serving Fortune 500 clients such as Deutsche Bank and Johnson & Johnson.**

- **The Petitioner's role encompasses driving mission-critical initiatives** that align Coupa's products with evolving global regulatory frameworks. By spearheading enhancements to the Coupa CRA platform, he integrated advanced features to address stringent standards such as the **EU's Digital Operational Resilience Act (DORA) and Payment Services Directive 3 (PSD3).** These enhancements transformed the platform into a robust tool for managing compliance risks, enabling clients to navigate complex regulatory landscapes seamlessly. His work ensured Coupa's products met **U.S. compliance standards**, a factor directly cited in analyst reports by IDC, Forrester, and Gartner as key to Coupa's leadership in third-party risk management. The resulting reliability and compliance adherence of the CRA platform have been instrumental in securing enterprise clients in regulated industries, contributing to a **15% annual revenue growth** for the product.
- **The Petitioner has redefined quality assurance at Coupa** by instituting rigorous processes and automation frameworks. His implementation of **AI-driven testing tools** and **CI/CD pipeline enhancements** reduced manual testing efforts by over **40%**, accelerating time-to-market for critical updates while ensuring product stability. These innovations have elevated the user experience for clients, directly correlating to improved customer retention rates and customer satisfaction by over **60%**. His leadership in quality engineering has been recognized internally through promotions, from Quality Engineering Manager to Senior Manager – Quality Engineering, and externally through successful compliance audits, which underscore Coupa's operational excellence.

- **The Petitioner's critical role extends to his leadership of Coupa's technical talent. As the hiring manager and engineering leader at Coupa,** he has played a critical role in building a high-performing team across the organization, particularly in CRA and RTS, where he supports compliance-driven enterprise platforms used by clients such as Deutsche Bank and Johnson & Johnson. **He currently leads a high-performing team of over 13 engineers,** meticulously evaluating candidates for roles central to Coupa's compliance and automation initiatives. His interview feedback, offer approvals, and negotiation discussions for hires for roles such as Senior Software Engineer reflect his discerning judgment in assembling a team capable of executing Coupa's strategic vision. Furthermore, his **end-to-end ownership of talent development** through structured onboarding, career pathing, and performance reviews ensures sustained alignment with business objectives.
- The Petitioner's initiatives have directly bolstered Coupa's distinguished reputation. Analyst firms such as **IDC, Forrester, and Gartner** consistently highlight Coupa's leadership in compliance products, attributing this success to the technical depth and reliability of platforms like CRA. Additionally, his management of **capitalizable engineering hours** for enterprise releases demonstrates fiscal accountability, further reinforcing Coupa's credibility with stakeholders. The platform's adoption by Fortune 500 clients in heavily regulated sectors, which is a direct outcome of the Petitioner's compliance and quality frameworks, solidifies Coupa's position as an industry leader.

As **Mark DeLuca, Regional Vice President at Coupa Software**, notes about the Petitioner:

*Because we went with Srimaan's recommendation, both problems were addressed in one fell swoop. **I am happy to report that once the performance problem was behind us, the client renewed a multi-million-dollar agreement with Coupa. These millions were a direct result of Srimaan's efforts.** Every client relationship runs into problems at some point. How those problems are addressed can either destroy a relationship, or create a more resilient, enduring relationship. I am pleased to share that due in large part to Srimaan, we achieved the latter. Srimaan's work was not only effective but original. His analysis and resolution strategy directly influenced how we now approach similar issues across other major clients. **The methodology he introduced has had lasting value beyond this one case and is regarded internally as a best-practice model.***

***In addition to his direct impact on this major financial services client, Srimaan developed and applied a robust, LTE-inspired software resiliency and use case automation framework tailored for compliance-driven systems.** This innovation streamlined performance analysis and issue resolution, and became the foundation for the white paper he authored during that engagement. The diagnostic methodology he introduced has since been reused across other high-stakes scenarios, making it a lasting and original contribution to our engineering practice (emphasis added).*

The Petitioner's multifaceted contributions as a technological innovator, compliance architect, and strategic leader underscore his indispensable role at Coupa. His work has not only driven measurable

revenue growth and client acquisition but has also elevated Coupa's standing in a competitive, regulated market.

Distinguished Reputation of Coupa Software Inc.

Coupa Software Inc. is an American technology platform valued at \$8 billion that has established itself as a global leader in AI-driven Business Spend Management (BSM), offering a comprehensive cloud-based platform that empowers organizations to optimize their procurement, invoicing, supply chain, and expense management processes. The company is headquartered in Foster City, California, with offices throughout Europe, Latin America, and Asia Pacific.

Since its inception in 2006, Coupa has expanded its reach to over **3,000 enterprise** customers worldwide, delivering significant cost savings and operational efficiencies across various industries. The company serves a diverse clientele across industries, including retail, manufacturing, healthcare, and financial services. Notable clients leveraging Coupa's platform include **Uber, Accenture, Nike, Toyota, Google, DocuSign, Mastercard, Procter & Gamble, Amazon, KPMG, Spotify, and Barclays**, among others. Coupa's impact on its clients is profound, with the company reporting that its community of users has realized over **\$221 billion** in savings to date by optimizing sourcing and supply chain strategies. This impressive figure underscores Coupa's role in driving economic resilience and growth for businesses worldwide.

Coupa's prominence is underscored by its consistent placement as a **Leader in Gartner's Magic Quadrant** for Source-to-Pay Suites, highlighting its comprehensive capabilities in procurement and expense management. The company has been certified as a **Great Place to Work in multiple countries**, including the U.S., U.K., Ireland, Germany, and India. The company was honored with the **2024 Top Software & Tech Award** in the Supply Chain Visibility category by Food Logistics and Supply & Demand Chain Executive, recognizing its enhancements to the Coupa Supply Chain Collaboration Suite. Such achievements underscore Coupa's role as a transformative force in the realm of business spend management.

For evidence that **Senior Manager, Quality Engineering** is a critical role, please see:

- **Exhibit C-1** for a statement from **Priya Gopinath**, attesting to the Petitioner's original contributions and Critical Role at Coupa Software Inc.
- **Exhibits C-4, C-5, C-6, & C-7** for evidence of the Petitioner's critical contributions at Coupa Software Inc.
- **Exhibit D-1** for the organization chart showcasing the Petitioner's role at Coupa.
- **Exhibit D-2** for evidence of the Petitioner's leadership role in talent acquisition and managerial oversight at Coupa.
- **Exhibit D-3** for a statement from **Mark DeLuca**, attesting to the Petitioner's critical role and contributions at Coupa Software Inc.
- **Exhibit E-1** for evidence of the Petitioner's promotion letter, bonus, and RSU grant letters at Coupa.

For evidence that **Coupa** is an organization of distinguished reputation, please see:

- **Exhibit D-4** for documents confirming the distinguished reputation of Coupa.
- **Exhibit D-5** for media coverage and accolades highlighting Coupa's leadership and standing in the field.

b) Principal Software Engineer at PegaSystems Inc.

The Petitioner's tenure as a Principal Software Engineer at Pegasystems, a globally recognized leader in business process automation and compliance software, unequivocally demonstrates his leading and critical role in driving enterprise-scale technological advancements for high-profile clients. In particular:

- At Pegasystems, **the Petitioner spearheaded mission-critical platform modernization initiatives** for clients such as **American Express** and **Con Edison**, whose operations demand the highest standards of security, compliance, and reliability. His technical leadership and architectural innovations not only elevated Pegasystems' reputation as a trusted partner for complex upgrades but also established industry-wide benchmarks for risk mitigation and regulatory resilience. For **American Express's GEM platform**, **the Petitioner spearheaded the migration from Pega 5.5 to 7.1.5**, ensuring seamless support for secure financial transactions at a global scale. Similarly, **his upgrade of Con Edison's CPMS platform from Pega 6.2 to 7.1.6** safeguarded the utility's ability to deliver regulated services while integrating advanced automation.
- **The Petitioner designed and implemented the P2P Upgrade Lab**, an automated framework that revolutionized platform modernization for Pegasystems' clients. This proprietary system addressed critical challenges in testing upgrade compatibility, validating post-upgrade rule integrity, and ensuring uninterrupted operations for regulated applications. The P2P Upgrade Lab's significance is underscored by its adoption as a **reference architecture** for client modernization projects, including its sustained use by institutions like **Navy Federal Credit Union**, one of the largest credit unions in the U.S.
- The Petitioner's leadership role at Pegasystems transcended formal hierarchies; as he **managed and mentored elite engineering teams**, resolved complex technical bottlenecks, and collaborated directly with enterprise clients to tailor solutions to their unique operational demands, exemplifying his indispensable role in the organization's success.
- The Petitioner's influence extended beyond individual projects through his **authorship of the Pega 7 Upgrade Guide**, a seminal resource that standardized enterprise modernization processes across industries. This guide, widely adopted internally and by partners such as **Cognizant**, streamlined large-scale upgrades for clients operating in heavily regulated sectors, including finance and utilities. These efforts not only preserved operational continuity for **Fortune 500 clients** but also fortified Pegasystems' standing as a leader in compliance-driven automation.

- The **broader industry impact** of the Petitioner's work is further evidenced by his presentation of the P2P Upgrade Lab at the **2014 Pega Developers Conference (PDC)** in Hyderabad, India, which is a premier event attended by over **3,000** global developers, architects, and industry leaders. His presentation on upgrade automation techniques disseminated best practices that reshaped client approaches to modernization, reducing risks associated with regulatory noncompliance and system downtime. This recognition by Pegasystems, of selecting him to represent their technological vision on a global stage, underscores his prominence as a thought leader whose contributions transcended organizational boundaries.

Distinguished Reputation of PegaSystems

Pegasystems Inc. is a global software company valued at over \$8 billion, which is renowned for its AI-driven decision-making and workflow automation solutions. Established in 1983 and headquartered in Cambridge, Massachusetts, Pegasystems has consistently delivered innovative low-code platforms that empower organizations to streamline operations, enhance customer engagement, and adapt swiftly to evolving business demands. Many of the world's most influential businesses rely on the Pegasystems platform to solve their most pressing challenges, from personalizing engagement to automating service to streamlining operations.

Pegasystems provides services in the industries of financial services, insurance, life sciences, healthcare, government, manufacturing, high tech, communications and media, energy, and utilities. Pegasystems clients include largely **Fortune 500 companies**, such as ING, Lloyds Banking Group, BAA, the state of Maine, PayPal, Cisco Systems, Philips, BNY Mellon, Verizon, Aflac, Bupa, Centrica, Coca-Cola, Commonwealth Bank of Australia, Ford, HCA Healthcare, JP Morgan, Shawbrook Bank, and Citi.

Pegasystems' commitment to excellence is exemplified by its consistent recognition in Gartner's Magic Quadrant reports. Notably, **Pegaystems has been named a Leader in the CRM Customer Engagement Center category for 12 consecutive years**, underscoring its robust capabilities in customer relationship management. In 2025, Gartner recognized Pegasystems as a Leader in the Magic Quadrant for Process Mining Platforms, reflecting the company's ability to provide comprehensive insights into business processes and drive digital transformation.

For evidence that **Principal Software Engineer** is a critical role, please see:

- **Exhibit C-2** for a statement from **Tom Gardam**, attesting to the Petitioner's Critical Role and Contributions at Pegasystems.
- **Exhibit C-3** for a statement from **Nagaraju Dasar**, attesting to the Petitioner's contributions and Critical Role at Pegasystems.
- **Exhibit C-8** for evidence of the Petitioner's critical contributions at Pegasystems.
- **Exhibit C-9** for evidence of the major significance of the Petitioner's contributions at Pegasystems.
- **Exhibit D-6** for the Petitioner's offer letter, experience certificate, and compensation revision letter at Pegasystems.

For evidence that **Pegasystems** is an organization of distinguished reputation, please see:

- **Exhibit D-7** for documents confirming the distinguished reputation of Pegasystems.
- **Exhibit D-8** for media coverage and accolades highlighting Pegasystems's leadership and standing in the field.

The above evidence establishes, based on a preponderance of the evidence, that the Petitioner has met the “performed in a leading or critical role for organizations with a distinguished reputation” criterion for EB-1A eligibility.

3) Commands a High Salary or Other Remuneration

The Petitioner, Mr. Yarram, commands a high salary and substantial remuneration for his role as a **Senior Manager – Quality Engineering at Coupa Software Inc.** His compensation package reflects his exceptional expertise, significant contributions to the field of Software Engineering, specializing in AI for Compliance, and the high demand for his specialized skills.

While the Petitioner has held several titles during his tenure at Coupa Software, we have elected to use **Senior Manager – Quality Engineering** as the operative title in this petition. This reflects the official designation most recently conferred by Coupa, as evidenced in the compensation verification letter dated **March 2025**.

We submit evidence documentation to show that the **Petitioner's annual compensation at Coupa Software Inc. was \$333,182.37**, as highlighted by his Total Compensation Summary for 2024, comprising a base salary of \$226,492.34, a substantial annual bonus, and equity in the form of Restricted Stock Units (RSUs). This substantial compensation underscores his high-level position and the value Coupa Software places on his expertise.

Several salary reports demonstrate that the petitioner's remuneration is significantly higher than others in his field.

- ***The Office of Foreign Labor Certification (OFLC)*** data confirms that the level 4 wage for a Computer and Information Systems Manager, equivalent to the petitioner's role as a Senior Manager – Quality Engineering, is **\$273,915 annually** in San Mateo, California.
- ***The Bureau of Labor Statistics*** data notes that the highest 10% of Computer and Information Systems Managers, equivalent to the petitioner's role as a Senior Manager – Quality Engineering, earn **\$239,200 annually**.
- ***ZipRecruiter***, a well-regarded salary survey source, notes that the top 10% of Senior Quality Managers, equivalent to the Petitioner's role of Senior Manager – Quality Engineering, earn more than **\$197,874** in California.
- ***Talent.com*** confirms that the highest earners in the role of Senior Quality Manager, which is equivalent to the Petitioner's role of Senior Manager – Quality Engineering, earn **\$187,946 annually** in California.

These benchmark titles, such as *Computer and Information Systems Manager* and *Senior Quality Manager*, are all appropriate comparators for the Petitioner's role, as they reflect overlapping scopes of responsibility, leadership level, and technical domain. The Petitioner's work at Coupa involves directing software quality strategy, leading global engineering teams, embedding compliance automation into enterprise platforms, and contributing to AI-driven system reliability, core functions that align with managerial-level engineering roles across both software and quality domains. Notably, the U.S. Department of Labor's Standard Occupational Classification (SOC) system places roles with similar responsibilities under **SOC 11-3021: Computer and Information Systems Managers**, further justifying equivalency with the titles used in government wage data.

When compared with the above industry benchmarks, Mr. Yarram's compensation places him at the top for his position. **With a total compensation exceeding \$333,182.37, Mr. Yarram stands significantly above industry averages**, positioning him within the top percentile of earners in his field. This disparity highlights the exceptional nature of his remuneration and the high value placed on his expertise by Coupa Software Inc.

As evidence, we submit:

- **Exhibit E-1** for evidence of the Petitioner's high remuneration as the Senior Manager – Quality Engineering at Coupa Software, including Compensation letters, Payslips, W-2s, Compensation summary, Restricted Stock Units (RSU), and Bonus granted by his employer, and related documentation.
- **Exhibit E-2** for several salary reports demonstrating that the Petitioner's remuneration is significantly higher than others in his field.

The evidence supports, by a preponderance of the evidence, that the Petitioner commands and will command a high salary or other remuneration for services in relation to others in the field and meets this regulatory criterion.

4) Judging the Work of Others in the Field

As further evidence of the Petitioner's esteemed reputation and recognition in the field of Software Engineering specializing in AI for Compliance, Mr. Yarram has been invited to serve as a judge at several prestigious industry events and conferences. His selection for these roles underscores his expertise, leadership, and the high regard in which he is held by his peers. The following outlines his contributions as a judge, providing evidence of his significant involvement in evaluating the work of others in his field.

- **IEEE AI Policy Committee (AIPC):** The Petitioner serves as a contributing expert on the IEEE Artificial Intelligence Policy Committee (AIPC), a nationally recognized advisory body under IEEE-USA, which represents over 160,000 U.S.-based professional engineers. The AIPC is composed of approximately 100 distinguished professionals from engineering, law, public policy,

and academia including senior AI advisors from Autodesk and policy directors from Microsoft. The Committee plays a critical role in shaping AI-related legislation, regulatory frameworks, and ethical standards across federal, state, and local levels. At the IEEE AIPC, the Petitioner works alongside cross-sector experts to help develop policy recommendations that emphasize technical rigor, ethical foresight, and societal impact. His contributions have included reviewing proposed legislation and participating in the development of official committee responses to key federal initiatives.

The Petitioner was actively involved in AIPC's evaluation of two major bipartisan legislative efforts: S.4769 **VET Artificial Intelligence Act**, introduced by Senators Hickenlooper (D-CO) and Capito (R-WV), and the **ASAP AI (American Science Acceleration Project) Initiative**, led by Senators Heinrich (D-NM) and Rounds (R-SD). The Petitioner's feedback on these draft bills contributed to IEEE-USA's formal policy positions submitted to congressional staff.

In addition, the Petitioner participated as a voting member in approving a joint **AIPC Energy Policy Committee position statement** on the energy demands of AI systems. This statement was advanced to the IEEE-USA Government Relations Council and Board of Directors for adoption, reflecting its influence on national energy and technology policy. The Petitioner's role at the IEEE AIPC underscores his standing as a leading authority in AI governance. His expertise positions him at the forefront of defining ethical standards for emerging technologies. This recognition is reflected in his leadership of discussions that produce policy documents widely cited by governments and international organizations navigating AI's legal and ethical complexities. His work ensures that innovation aligns with societal values, cementing his influence in global AI policy discourse.

Erica R. Wissolik, Senior Program Manager, Government Relations at the IEEE USA notes about the Petitioner:

Mr. Yarram played a substantial role in several of our most recent activities, including assisting US Senate staff as they drafted the bipartisan Validation and Evaluation for Trustworthy Artificial Intelligence (VET AI) Act. This legislation aims to promote third-party evaluations and guidelines to ensure AI systems are trustworthy, auditable, and transparent. Mr. Yarram contributed technical recommendations on assurance frameworks and risk categorization mechanisms that were included in IEEE-USA's input.

He also made significant contributions to our response to the American Science Acceleration Project (ASAP), a bipartisan U.S. Senate effort to catalyze U.S. scientific research through next-generation AI infrastructure. Mr. Yarram emphasized the importance of integrating AI capabilities into national scientific pipelines and advised on compute accessibility and multi-agency alignment for long-term sustainability.

Additionally, Mr. Yarram provided technical input to the White House Request for Information on the 2025 AI Research & Development Strategic Plan required by an Executive Order. His submission focused on translational research pathways, national coordination models, and

public-interest safeguards in the development of foundational AI. His work was integral to IEEE-USA's consolidated response to the RFI.

During IEEE-USA's 2025 Congressional Visits Day, Mr. Yarram visited Washington and directly engaged with several prominent legislators to discuss national AI public policies. His advocacy on behalf of IEEE's members emphasized the importance of investing in trustworthy AI, developing the AI workforce, and modernizing infrastructure (emphasis added).

- **Reviewing Role for International Conferences:** The Petitioner was selected as a reviewer for four major international conferences, including the 2nd International Conference on Emerging Research in Computing, Information, Communication, Artificial Intelligence, & Machine Learning (**ERCICAM**), the 2025 IEEE International Conference on Contemporary Computing and Communications (**INC4**), the 13th International Conference on Soft Computing for Problem Solving (**SocProS**), the Second International Conference on Data Science and Exploration in Artificial Intelligence, (**CODE AI**), and the IEEE World AI IoT Congress (**AIIoT**). **These international conferences are prestigious academic events that bring together researchers and professionals to discuss the latest advancements in technology. They are highly respected and are platforms where leading researchers and professionals present their latest findings. Being selected as a reviewer for such conferences is an acknowledgment of one's expertise and standing in the field, as reviewers play a critical role in maintaining the conference's high academic standards.** The Petitioner reviewed several research papers submitted for presentation at the conferences, assessing their originality, technical merit, and contribution to the field. His reviews ensured that only high-quality research contributing significant knowledge to the field was presented at the conferences. His expertise in software engineering provided valuable insights into the relevance and potential impact of the research works. The Petitioner's role as a reviewer emphasizes his standing as a key expert in these domains.
- **Evaluating Role for IEEE's Senior Member Program:** The Petitioner's role as an evaluator for the IEEE's Senior Member Program demonstrates his recognized authority in judging the work of peers. The IEEE Senior Member designation is a globally recognized honor awarded to fewer than 10% of IEEE's over 400,000 members, reserved for individuals who exhibit exceptional technical and professional achievements. As highlighted in a letter from Howard Wolfman, Chair of the IEEE Admission and Advancement (A&A) Committee, **the Petitioner was entrusted to evaluate a large number of IEEE Senior Member applications, a role requiring expert assessment of candidates' technical accomplishments, leadership, and societal impact.** His evaluations directly determined which professionals met the program's rigorous standards, ensuring only deserving candidates attained this prestigious distinction. The Petitioner's contributions and evaluations directly helped in safeguarding the integrity of the Senior Member Program, which is a vital membership development initiative that elevates the stature of recipients, their employers, and IEEE itself.
- **Review of scholarly research presentations:** The Petitioner's distinguished role as a judge of others' scholarly work in the field of Software Engineering is exemplified by his invitation as a domain expert by the Nitte Meenakshi Institute of Technology (NMIT) to critically evaluate and

refine the research progress of two **Ph.D. scholars** during their research presentations in a Seminar. Recognized for his expertise in AI and deep learning, the Petitioner was specifically selected to assess advanced research projects, including **Electricity Power Consumption Data Analysis using Deep Learning** and **AI-Driven Software Process Optimization for Small Firms**, where his authoritative feedback directly shaped the scholars' methodologies and strengthened their contributions to these cutting-edge domains. His constructive critique, hailed by the host institute as immensely beneficial and pivotal in providing significant clarity and guidance, underscores his capacity to influence high-stakes academic research at an institutional level. This invitation reflects his stature as a trusted judge of scholarly merit and his sustained impact in judging and elevating the work of peers. By engaging in such selective, expert-level evaluations, the Petitioner demonstrates his prominence and leadership in advancing the field through rigorous peer assessment.

- **Role as Book Reviewer:** The Petitioner has made significant contributions to evaluating the work of others through his role as a **peer reviewer** for **IGI Global Scientific Publishing**, a renowned international academic publisher in the fields of Science and Technology, among others. IGI Global Publishing is widely recognized as a premier academic publisher renowned for its rigorous scholarly standards and extensive contributions to the fields of technology, information science, education, and beyond. It is committed to disseminating high-quality, peer-reviewed research, including thousands of reference books, journal articles, and teaching cases authored by global experts. Known for its interdisciplinary focus and innovation-driven ethos, IGI Global emphasizes emerging technologies and societal challenges, fostering collaboration among researchers, educators, and industry professionals. Its dedication to open access initiatives and cutting-edge digital libraries further cements its role as a trusted resource for advancing global knowledge and academic excellence.

The Petitioner has reviewed the book titled "The Role of Artificial Intelligence in Advancing Applied Life Sciences" for IGI Global Publishing. As a trusted technical authority in the field, the Petitioner's evaluations have played a crucial role in improving the technical accuracy, clarity, and relevance of the work, directly influencing its development. His contributions have been acknowledged in editorial communications, with his constructive feedback helping to shape high-quality resources. The topics reviewed, which include artificial intelligence and software engineering, reflect critical areas of technological innovation.

- **Role as a reviewer for Scholarly Journals:** The Petitioner contributed as a reviewer for two scientific journals, including the **IAES International Journal of Artificial Intelligence**, the **Computer Science and Engineering Research (CSER) Journal**, and the **International Journal of Automation, Artificial Intelligence and Machine Learning**. These journals publish high-quality original research, and being selected as a reviewer for such impactful journals showcases the Petitioner's prominence in the field as well as his contributions to maintaining the quality and standards of these scientific Journals.
- **Judging Experience for Hackathon:** The Petitioner contributed as a Judge at the **HackMerced X Hackathon 2025**, showcasing his extraordinary ability and sustained acclaim in software

engineering. This prestigious Hackathon attracts participants from diverse academic backgrounds to compete in innovative project development across specialized tracks, with over 300 students from all backgrounds. The event has established itself as a significant platform for technological innovation and community building, providing participants with world-class mentoring, industry workshops, and opportunities to connect with major technology companies. The Petitioner's role as a judge involved evaluating projects based on creativity, technical implementation, and potential impact, leveraging his expertise in software engineering.

Additionally, the Petitioner has been invited to serve and has served as a Judge at the following Hackathons:

- o **Raptors Signature Hackathon:** The Raptors Signature Hackathon is organized by Hackathon Raptors, a prestigious organization focused on tech-driven innovation and altruism-centered events that bring together some of the top engineers in the world to drive societal progress. The organization maintains a selective Fellowship program reserved for individuals with significant recognition in engineering, technology, or related fields, of which the Petitioner, Mr. Yarram, is a Fellow. The hackathons focus on leveraging collective intelligence to address complex societal challenges through technological innovation.
- o **HackDavis Hackathon 2025:** HackDavis is recognized among the **top 50 hackathons in the world** and has provided thousands of students with opportunities to display their skills and knowledge in a professional environment. As one of the largest collegiate hackathons in California, HackDavis brings together over 900 students, creators, and leaders to create for social good.
- o **Synthack IEEE Hackathon:** The Synthack DSATM IEEE Hackathon is organized by Dayananda Sagar Academy of Technology and Management (DSATM), which hosts an active IEEE Power and Energy Society Chapter and is ranked among India's leading engineering institutions. The hackathon leverages IEEE's global reputation as the world's largest technical professional organization to maintain high standards for technological innovation and engineering excellence.

The Petitioner's extensive record of serving as a judge, reviewer, and evaluator at high-level industry programs, events, international conferences, and book review processes underscores his recognized stature in his field. Through these roles, the Petitioner has consistently influenced industry standards, fostered innovation, and ensured the professional community upholds the highest levels of excellence. By serving in these roles, the Petitioner has actively contributed to the advancement of his field, ensuring that excellence and innovation are recognized and promoted.

As evidence that the Petitioner served as a judge for the aforementioned events, please see:

- **Exhibit F-1** for evidence of the Petitioner's role as a key member of the IEEE AIPC.

- **Exhibit F-2** for a Statement from Erica R. Wissolik, attesting to the Petitioner's role as a key member of the IEEE AIPC.
- **Exhibit F-3** for a Statement from Dr. Zhi Ding, attesting to the Petitioner's role as a key member of the IEEE AIPC.
- **Exhibit F-4** for evidence of the Petitioner's role as a reviewer for international conferences.
- **Exhibit F-5** for evidence of the Petitioner serving as an evaluator for the IEEE Senior Member program.
- **Exhibit F-6** for evidence of the Petitioner's role as a reviewer for scholarly research presentations.
- **Exhibit F-7** for evidence of the Petitioner's role as a book reviewer.
- **Exhibit F-8** for evidence of the Petitioner's role as a reviewer for Scholarly Journals.
- **Exhibit F-9** for evidence of the Petitioner's role as a Judge for prestigious Hackathons.

This comprehensive evidence demonstrates that the Petitioner has judged the work of others in his field of expertise, meeting the requirements of this EB-1A criterion.

5) Authorship of scholarly articles in professional or major trade publications or other major media in the field

The Petitioner's status as a top expert in the field is further established by his authorship of publications at top-ranking international conferences and journal publications. Mr. Yarram's publications reflect rigorous research, intellectual originality, and contributions that inform and shape ongoing discourse among scholars, industry professionals, and policy influencers.

Attached as **Exhibit G** are complete copies of the Petitioner's publications, as well as background information about the conferences and journals that published his work. The journals and conferences in which the Petitioner has published and presented his work are of high-quality, prestigious publications, as indicated by factors such as their high rankings and international editorial boards staffed by panels of experts. Of particular note:

- Mr. Yarram co-authored the article **"Intelligent Time Series Anomaly Detection in IoT Using Feature Extraction and Hybrid Classification"**, which was published in the *Journal of Computational Analysis and Applications* and addresses the rising complexity and frequency of IoT cyberattacks, particularly focusing on detecting sophisticated Denial-of-Service (DoS) attacks. Due to limitations in traditional methods, it proposes a novel approach using a VGGNet model for hierarchical temporal feature extraction and Artificial Butterfly Optimization (ABO) for efficient feature selection. Additionally, the study introduces a hybrid Capsule Network (CapsNet) to classify attacks accurately, demonstrating significant improvements in accuracy, reduced false alarms, and real-time scalability on standard datasets.
- Mr. Yarram co-authored the article **"Predictive Test Automation: Shaping the Future of Quality Engineering in Enterprise Platforms"**, which was published in the *Journal of Computational Analysis and Applications* and highlights that AI- and ML-driven predictive test automation is the essential response to the growing complexity and velocity of modern software

delivery, because it brings early defect detection and broader, smarter test coverage. By spotlighting advances such as AI-generated test cases, self-healing frameworks, and predictive analytics, the study shows how organizations in finance, insurance, healthcare, and other regulated domains can shorten test cycles, ensure compliance, and raise software reliability. Although data quality, integration complexity, and skills gaps pose hurdles, the analysis concludes that gains in scalability, cost efficiency, and user satisfaction overwhelmingly outweigh those limits. Looking forward, the rise of codeless tools, richer AI capabilities, and tighter DevOps integration signals that predictive testing will soon be indispensable for delivering high-quality software at speed.

- Mr. Yarram co-authored the article “**Automated Chaos Experiments: Enhancing Continuous Testing with Controlled Failure Scenarios**”, which was published in the *Journal of Computational Analysis and Applications* frames automated chaos engineering as the next leap in resilience practice, charting its shift from manual fault-injection to seamless inclusion in CI/CD pipelines via tools like ChaosEater, Gremlin, and digital twins. By automating failure design, execution, and feedback, these platforms cut operational overhead while boosting scalability, security, and observability, with proven wins in cloud infrastructure, database debugging, and twin-based testing. Despite challenges around experiment scale and security, the study sees AI-driven adaptive chaos and standardized resilience metrics on the horizon, making automated chaos engineering indispensable for building robust, future-ready systems.
- Mr. Yarram co-authored the article “**Leveraging Deep Learning for Contextual Search in Multi-Domain Knowledge Repositories: Enhancing Software Testing and Result Precision**”, which was published in the *Journal of Computational Analysis and Applications* and emphasizes the revolutionary capacity of deep learning in reshaping software testing methodologies, allowing enterprises to produce superior-quality software with enhanced confidence and speed. By fusing multi-domain knowledge sources, the approach surfaces hidden links, cuts false positives, and speeds adaptive test execution.
- Mr. Yarram co-authored the article “**Future-Proofing Microservices: Automated Performance Tuning in Next-Gen Cloud Architectures**”, which was published in the *Journal of Computational Analysis and Applications* and offers actionable insights for constructing secure, efficient, and scalable microservices architectures through the integration of advanced optimization algorithms, predictive analytics, and automated security measures, hence facilitating innovation in next-generation cloud technologies.

The **Journal of Computational Analysis and Applications** is a peer-reviewed academic journal dedicated to advancing the field of computational mathematical analysis and its diverse applications. Published by **Eudoxus Press, LLC**, the journal serves as a platform for disseminating **high-quality original research** that bridges theoretical mathematics and practical computational methods. Its scope encompasses a wide array of topics, and the journal employs a **rigorous peer-review process** to ensure the publication of impactful research. By featuring contributions from leading academics and practitioners, it holds a distinguished reputation in the field of computational mathematics.

Conference Publications in IEEE

The Petitioner has submitted several scholarly research papers at international conferences, which have been published by the Institute of Electrical and Electronics Engineers (IEEE) and Springer. IEEE is the world's largest technical professional organization dedicated to advancing technology for the benefit of humanity. Conferences sponsored and organized by IEEE are highly respected and are platforms where leading researchers and professionals present their latest findings. Publication in IEEE is a mark of distinction and a testament to the quality and impact of the research.

Peer review is vital to the quality of published research at IEEE. Each article submitted to IEEE is evaluated by at least two independent reviewers selected by a member of the publication's editorial board. Therefore, all of the following scholarly research papers authored by the Petitioner have been subject to a **rigorous peer review process.**

- Mr. Yarram primary author of the article **“An Optimized Deep Learning Approach for Intrusion Detection: AE-DBN Hybrid Model with Dingo Feature Selection”**. This paper was accepted for submission and presentation at the *2025 International Conference on Computing for Sustainability and Intelligent Future (COMP-SIF)*, and published by the *Institute of Electrical and Electronics Engineers (IEEE)*. The Study presents a deep learning model for network attack detection that combines Autoencoder (AE) and Deep Belief Network (DBN), together with an optimised feature.
- Mr. Yarram primary author of the article **“Intelligent Malicious URL Detection Using Extreme Multi-Label Text Classification for Phishing Prevention”**. This paper was accepted for submission and presentation at the *2025 International Conference on Computing for Sustainability and Intelligent Future (COMP-SIF)*, and published by the *Institute of Electrical and Electronics Engineers (IEEE)*. The study suggests a Malicious URL Phishing Attack Detection Model that utilizes the Extreme Multi-label Text Classification (XMTC) Algorithm to improve the detection accuracy and scalability.
- Mr. Yarram primary author of the article **“Anomaly Detection in Network Traffic for Proactive Security Threat Identification Using Improved Gated Recurrent Unit”**. This paper was accepted for submission and presentation at the *3rd International Conference on Integrated Circuits and Communication Systems*, and published by the *Institute of Electrical and Electronics Engineers (IEEE)*. This research proposes an improved Gated Recurrent Unit (GRU) with feature extraction of sequential patterns and an adaptive mechanism to detect the anomaly in network traffic effectively.
- Mr. Yarram co-authored the article **“Enhanced Instagram Spam Detection Using Convolutional Attention Networks with Water Wave Optimization-Based Fine-Tuning”**. This paper was accepted for submission and presentation at the *2025 International Conference on Computing for Sustainability and Intelligent Future (COMP-SIF)*, and published by the *Institute*

of *Electrical and Electronics Engineers (IEEE)*. The study examines the most recent developments in the field of real-time financial fraud detection, including methods that use behavioral analytics, blockchain, AI, and ML. With the help of several case studies and practical applications, the authors offer data-driven insights regarding detection rates, cost efficiency, and industry-specific obstacles.

The **International Conference on Computing for Sustainability and Intelligent Future (COMP-SIF)** is a flagship event that brings together leading researchers, practitioners, and industry experts to explore the intersection of advanced computing technologies and their pivotal role in promoting sustainability and shaping an intelligent future. The conference provides an exceptional opportunity for researchers, practitioners, and industry experts to discuss innovative solutions that leverage computing for sustainable development and intelligent systems. **Accepted papers were published by IEEE and indexed by IEEE Xplore**, ensuring wide dissemination of research findings.

- Mr. Yarram co-authored the article **“Towards Robust Mobile Authentication: Behavioral Biometrics and Optimized Classification for Continuous User Recognition”**. This paper was accepted for submission and presentation at the *3rd International Conference on Integrated Circuits and Communication Systems*, and published by the *Institute of Electrical and Electronics Engineers (IEEE)*. This study focuses on the utilisation of soft keyboard typing behaviour as a behavioural biometric for continuous user recognition. The authors propose an optimised and speedy data classification system based on a class attention layer (CAL) in CapsNet, which uses the Slime Mould Algorithm (SMA) to choose features, providing fast and very accurate classification results.

The **International Conference on Integrated Circuits and Communication Systems (ICICACS)** aims at bringing together researchers, scientists, engineers, research scholars, and industrial participants around the world to a common platform to share their experiences, new ideas, and research findings on all aspects of Computer Engineering and Electrical and Electronics Engineering. The researchers present the state of the art of expansion and technical explanation covering a wide range of engineering subjects. This conference offers an international forum for sharing ideas, discussing the findings of research, and introducing theoretical and practical applications in these fields. The current focus of global science, Electronics & Communication Engineering trends, interdisciplinary research, and engineering activities are expressed in this conference. **Accepted papers were published by IEEE and indexed by IEEE Xplore**, ensuring wide dissemination of research findings.

- **Mr. Yarram is the primary author** of the peer-reviewed article **“Privacy-Preserving Healthcare Data Security Using Large Language Models and Adaptive Access Control”**, which was **accepted for publication and presentation** at the **World AI & IoT Congress (AIHOT)** and formally published by the **Institute of Electrical and Electronics Engineers (IEEE)**. This paper presents a **novel AI-driven framework** that leverages **Large Language Models (LLMs)** for **adaptive risk-based access control** and **real-time threat anomaly detection** in healthcare data

systems. The proposed solution **dynamically adjusts access privileges based on contextual risk analysis** and enhances cybersecurity by identifying **zero-day vulnerabilities**, thereby protecting sensitive electronic health records (EHRs) in compliance with **HIPAA and GDPR** regulations.

The **AIIoT Congress** is a **globally recognized IEEE-affiliated conference** that brings together researchers and industry experts from over 30 countries to showcase **leading-edge research** in artificial intelligence and the Internet of Things. All accepted papers undergo **rigorous peer review** and are **indexed in the IEEE Xplore Digital Library**, ensuring **international scholarly visibility**.

Mr. Yarram's inclusion in this conference highlights the originality and technical excellence of his work and underscores his **growing influence** in the fields of **AI, healthcare cybersecurity, and adaptive access control systems**.

- **Mr. Yarram is the primary author** of the **peer-reviewed** article "*Quantifying Solidarity Economy Credit Risk using CNNs and Hybrid Optimization*", which was **accepted for presentation** at the **3rd International Conference on Intelligent and Cloud Computing (ICoICC 2025)** and will be published in the IEEE proceedings. This paper introduces a **machine learning-based risk evaluation framework** tailored for **solidarity economy credit portfolios**, combining **convolutional neural networks (CNNs)** with a **hybrid Bat Optimization algorithm** and **attention mechanisms** for enhanced predictive accuracy. The study presents a novel solution to class imbalance in credit datasets and achieves superior fraud detection performance through deep learning-based binary classification, demonstrating over **98% accuracy** in multiple evaluation metrics.

The **ICoICC conference** is a respected IEEE-affiliated international forum that brings together global researchers and practitioners in cloud computing, artificial intelligence, and financial technology. All submissions undergo **rigorous peer review** and are selected for publication based on scholarly contribution and technical rigor.

Mr. Yarram's work reflects significant innovation in AI-driven financial risk prediction and underscores his **growing influence in the fields of machine learning, credit risk modeling, and financial cybersecurity**.

- Mr. Yarram co-authored the article "**Advancing Fruit Categorization with Yolo v7: Enhanced Segmentation and Classification Using Weighted Loss and SFOA**". This paper was accepted for submission and presentation at the *2025 International Conference on Knowledge Engineering and Communication Systems (ICKECS)*, and, therefore, is going to be published by the *Institute of Electrical and Electronics Engineers (IEEE)*.

Other Conference Publications

- Mr. Yarram has submitted a scholarly research paper titled "**Multimodal Transformer Fusion for Emotion Recognition Using Audio, Video, and Text Data**," which has been accepted for

the 3rd International Conference on 6G Communications, Networking, and Signal Processing (SGCNSP-2024). The paper will be published by **Springer**, an international publisher, in their prestigious “**Lecture Notes in Electrical Engineering.**”

Dr. Piyush Kumar Pareek, Professor and Head of the Department of Artificial Intelligence and Machine Learning at Nitte Meenakshi Institute of Technology, Bengaluru, has collaborated extensively with the Petitioner and integrated his research into academic curricula. In pertinent parts, he confirms:

The decision to incorporate Mr. Yarram’s work into our curriculum was deliberate and rooted in the exceptional practical relevance, technical depth, and originality of his research. While there is a wide body of academic literature on AI and software engineering, what sets Mr. Yarram apart is his ability to bridge the gap between theory and industry-grade implementation. His frameworks are not abstract models, but real-world systems deployed in global enterprise environments, delivering measurable improvements in scalability, performance, and compliance integrity. These qualities make his research uniquely valuable for our students, who must understand not only foundational principles but also how those principles are applied to solve mission-critical challenges in regulated sectors like finance, healthcare, and procurement.

In particular, his work on predictive automation, anomaly detection, and deep learning-based system resilience stands out for its novel integration of AI methods within quality engineering pipelines – a combination that is both rare and highly instructive. His publications provide rich, replicable case studies that allow students to explore how modern AI technologies can be engineered into reliable systems under real-world constraints, including data sparsity, regulatory risk, and deployment scale. This pedagogical value, coupled with his rigorously documented research practices, made his contributions the clear choice for integration into our advanced modules (emphasis added).

The Petitioner’s authorship of articles in nationally and internationally circulated publications within the field establishes that the Petitioner has met the “authorship of scholarly articles” criterion for EB-1A eligibility.

6) Membership in Associations in the Field which Require Outstanding Achievement

As evidence of the Petitioner’s extraordinary ability, Mr. Yarram is a member of prestigious organizations that only grant memberships to top experts in the field. Please see **Exhibit H** for evidence of the Petitioner’s membership in **Sigma Xi, IETE, and Raptors**, including background information on the organizations, criteria for membership selection, and selectivity of the organizations granting membership. Of particular note:

- **Sigma Xi, Full Member**

Sigma Xi, The Scientific Research Honor Society, is the world’s largest multidisciplinary research honor society, renowned for recognizing exceptional scientific achievement and fostering collaboration among leading researchers. **Membership in Sigma Xi is highly selective, requiring**

nomination by current members and a rigorous review process that evaluates candidates' research contributions, interdisciplinary impact, and potential for future advancements. The society maintains stringent standards, with admission rates reflecting its exclusivity; only those who demonstrate “noteworthy achievement” in research, evidenced by publications, patents, or significant scientific breakthroughs and contributions, qualify for full membership.

Sigma Xi's membership roster includes over 200 Nobel laureates, such as **John Bardeen** (Physics, twice awarded), **Jennifer Doudna** (Chemistry, CRISPR-Cas9), and **Frances Arnold** (Chemistry, directed enzyme evolution), as well as luminaries like **George M. Whitesides** (nanotechnology) and **Andrew Cleland** (quantum mechanics). These distinguished members, alongside leaders in academia and industry, form the committees that assess candidates, ensuring that only individuals whose work meets the highest global benchmarks are admitted.

The Petitioner's election as a full member in Sigma Xi underscores his exceptional contributions to the scientific and engineering community. His nomination and subsequent approval by Sigma Xi's expert reviewers reflect his fulfillment of the society's rigorous criteria, including primary authorship of multiple peer-reviewed papers that advance his field. The selection committee, composed of internationally recognized researchers and Nobel laureates, evaluated his work's originality, interdisciplinary relevance, and tangible impact on scientific progress. By electing the Petitioner, Sigma Xi has formally recognized that his research achievements align with the caliber of its most esteemed members, whose collective work has shaped modern science. This membership, contingent solely on demonstrated excellence rather than academic degrees or institutional affiliation, serves as independent validation from preeminent experts that the Petitioner's accomplishments meet the highest standards of global scientific achievement.

In conclusion, Sigma Xi's rigorous nomination process, competitive selection rate, and reliance on peer validation by high-caliber researchers establish that membership is reserved for individuals with extraordinary, sustained contributions to their fields. **Mr. Yarram's full membership at Sigma Xi affirms that his work has been scrutinized and endorsed by leading authorities.**

- **IETE Fellowship**

The Institution of Electronics and Telecommunication Engineers (IETE), established in 1953 and recognized by the Government of India, is India's leading and recognized professional society devoted to the advancement of Science and Technology of Electronics, Telecommunication, and Information Technology. **IETE confers its high distinction, the Fellow (FIETE) title, to individuals who demonstrate sustained, exemplary contributions to these fields.** Elevation to Fellowship of IETE requires candidates to meet stringent eligibility criteria, including:

- A minimum age of 35;
- Advanced academic qualifications equivalent to a postgraduate degree;
- A decade of professional experience with at least **five years in high-responsibility roles**; and
- **Evidence of outstanding contributions to the discipline.**

The selection process, overseen by IETE's Governing Council, is highly competitive, reflecting the Fellowship's exclusivity. Applications undergo rigorous evaluation by a panel of distinguished academics and industry leaders renowned for their pioneering work in electronics and telecommunications. These experts assess candidates' technical leadership, impact on advancing industry standards, and the significance of their innovations, ensuring alignment with IETE's mission to drive technological progress.

The Petitioner's election as an IETE Fellow underscores his exceptional standing in the field. His application demonstrated over a decade of experience, including leadership roles in high-stakes projects, advancements in technology integration, and contributions that have influenced industry practices. The Governing Council, comprising eminent authorities in the discipline, recognized his achievements as surpassing standard professional benchmarks in the field of Software Engineering, specializing in AI for Compliance. This peer-reviewed endorsement by nationally and internationally recognized experts confirms that the Petitioner's accomplishments meet IETE's exacting standards for excellence. His Fellowship, granted through a competitive and selective process reserved for the most accomplished professionals, serves as authoritative validation of his outstanding achievements.

- **Hackathon Raptors Fellowship**

Hackathon Raptors is an internationally recognized organization dedicated to fostering innovation through competitive and collaborative hackathons. The organization brings together some of the most talented engineers, developers, and AI specialists to solve real-world challenges in Software Development, Artificial Intelligence, and digital product management.

The Hackathon Raptor Fellowship is the organization's most esteemed level of membership, reserved for individuals who have demonstrated and sustained significant achievements for at least five continuous years, typically within the past decade. Eligibility requires clear and verifiable evidence of impactful contributions, accomplishments, and their subsequent ripple effect within the relevant sphere. Membership nominations are subject to a rigorous peer-review process by at least five existing Fellows, each an expert recognized in fields essential to Hackathon Raptors' mission. These fellow reviewers carefully evaluate whether the candidate's achievements align with the Fellowship's high standards of innovation, leadership, and tangible impact. Admission to Hackathon Raptors relies on a demonstrated record of outstanding work, for example, leading novel technology initiatives, advancing knowledge within the industry, and fostering large-scale innovation that benefits broad communities.

The Petitioner's acceptance for Fellowship at Raptors followed an exhaustive assessment not only of his technical prowess and leadership in Software Engineering, specializing in AI for Compliance, but also of the measurable real-world impact of his projects. In the Petitioner's case, his experience as a Technology Leader at Coupa, particularly his work in developing scalable solutions for compliance-heavy industries, and his expertise in test automation and quality engineering, distinguished him as someone whose contributions consistently rise above standard professional expectations. **The Fellowship panel determined that the Petitioner's innovations in integrating AI-driven test automation and enhancing software resilience, as well as his strategic leadership in multiple high-stakes projects,**

merited recognition in line with Hackathon Raptors’ competitive selection benchmarks. The reviewers who conferred the Petitioner’s Fellowship rank among nationally and internationally recognized professionals in engineering and technology. Their endorsement of Mr. Yarram’s membership affirms that renowned experts within his discipline have validated his achievements as meeting the Hackathon Raptors’ exacting criteria.

To conclude, **the Petitioner’s Fellowship in Hackathon Raptors underscores his exceptional standing in the engineering and technology community.** The selective, expert-based vetting process and the documented standards for admission establish that only individuals with verified, outstanding achievements receive this distinction.

As evidence thereof, please see:

- **Exhibit H-1** for evidence of Mr. Yarram’s place as a Full Member of Sigma Xi.
- **Exhibit H-2** for information about Sigma Xi and its global reputation.
- **Exhibit H-3** for evidence of Mr. Yarram’s place as a Fellow of the IETE.
- **Exhibit H-4** for information about IETE and its global reputation.
- **Exhibit H-5** for evidence of Mr. Yarram’s place as a Fellow of Raptors.
- **Exhibit H-6** for information about Raptors and its global reputation.

The evidence overwhelmingly demonstrates that the Petitioner is a member of an organization that mandates outstanding achievements in the field as a prerequisite for membership. Furthermore, the evidence clearly establishes the significance of the Petitioner’s membership within the prestigious organization.

IV. FINAL MERITS

In accordance with the *Kazarian* opinion, the second step of the two-part approach is a final merits determination that considers all of the evidence in the context of whether the Petitioner meets the required level of high achievement and sustained international reputation in the field. The aggregated evidence establishes that the Petitioner not only meets at least three of the regulatory criteria, but also that he has been recognized internationally as outstanding in his field of expertise.

The Petitioner is, without a doubt, in the **top 1% of Software Engineering, specializing in AI for Compliance, professionals** worldwide. Leading experts have provided testimonial letters discussing the originality and significance of the Petitioner's achievements (See **Exhibit C**).

Based on a preponderance of the evidence, the Petitioner qualifies as an Alien of Extraordinary Ability based on the following:

- **The Petitioner has made original contributions of major significance in the field** of Software Engineering, specializing in AI for Compliance. At Coupa, he spearheaded transformative compliance automation on the Third-Party Risk Assessment (CRA) platform, dramatically improving regulatory adherence, reducing manual testing by 80%, accelerating processes by 30%,

and shortening compliance cycles by 75%, results that directly boosted revenue by 15% year-over-year and safeguarded billions for global enterprises like Deutsche Bank and Accenture. His innovations, validated by industry analysts, align closely with strategic U.S. federal priorities in cybersecurity, supply chain resilience, and AI governance. Similarly impactful at Pegasystems, he developed critical frameworks such as the influential Pega 7 Upgrade Guide and the P2P Upgrade Lab, enabling secure modernization of mission-critical platforms for regulated organizations, including American Express and Con Edison, setting industry standards widely adopted beyond his company. His thought leadership and methodological innovations have reshaped enterprise software compliance and modernization, elevating industry practices, fortifying national infrastructure reliability, and positioning him as a seminal figure in his field.

- **The Petitioner held critical roles at industry-leading organizations with distinguished reputations**, notably Coupa Software Inc. and Pegasystems Inc., significantly influencing their strategic direction and market leadership. At Coupa, as the Senior Manager, Quality Engineering, he drove essential compliance and quality initiatives for the Coupa Risk Assess (CRA) platform, aligning it with stringent global standards like GDPR, DORA, and PSD3, leading to substantial client adoption in highly regulated industries and a 15% annual revenue growth. His leadership modernized Coupa's quality engineering and resilience processes through AI-driven automation, resulting in a 40% reduction in manual testing and dramatically improving customer satisfaction by 60%. He also played a pivotal role in talent acquisition and development, ensuring sustained operational excellence and reinforcing Coupa's distinguished reputation. At Pegasystems, as Principal Software Engineer, he spearheaded mission-critical platform upgrades for prominent clients like American Express and Con Edison, establishing best practices through initiatives such as the widely adopted Pega 7 Upgrade Guide and the P2P Upgrade Lab, recognized as industry benchmarks. His presentation of these innovations at major global conferences underscored his status as a thought leader, significantly contributing to Pegasystems' recognition as a market leader in Gartner's Magic Quadrant across multiple categories.

The Petitioner has also played a critical role as the Engineering Manager, Quality at Goto (LogMeIn), a globally recognized technology company renowned for products like GoToMeeting and LastPass. Tasked with overseeing LogMeIn's mission-critical Business systems platform, which processes **\$700 million** in annual transactions, the Petitioner ensured the system's scalability, compliance, and reliability during an unprecedented surge in demand for remote collaboration tools due to COVID-19. **His leadership directly enabled LogMeIn to seamlessly onboard millions of global users**, adapt to volatile international tax and financial regulations, and implement automation frameworks that reduced errors while maintaining 100% uptime. By spearheading system enhancements that fortified Sterling's performance under extraordinary strain, the Petitioner safeguarded LogMeIn against compliance risks and revenue loss, directly supporting its expansion into new markets. These achievements, validated by the platform's flawless handling of exponential transaction growth and adherence to stringent global standards, underscore the Petitioner's indispensable role in sustaining LogMeIn's industry leadership (*See Exhibit I-1*).

Additionally, **the Petitioner has held a critical role as Lead Software Engineer in Test at LendingClub**, a publicly traded fintech pioneer. **His contributions were integral to the**

company's operational and financial success, directly aligning with its core business of scalable lending solutions. By spearheading the **development and refinement of vital credit models** such as purchase finance and auto refinance systems, the Petitioner enhanced LendingClub's risk assessment capabilities, enabling data-driven lending decisions that underpinned a **21% surge in loan originations**. Furthermore, his leadership in integrating **high-impact third-party APIs** expanded LendingClub's market reach and streamlined loan processing efficiency, while his **automation frameworks** reduced manual errors and accelerated validation workflows, directly supporting scalability during peak demand periods. Crucially, his rigorous compliance oversight ensured adherence to strict regulatory standards, safeguarding the company's reputation in a heavily scrutinized industry (See **Exhibit I-1**).

- **The Petitioner commands a high salary and substantial remuneration** as a Senior Manager – Quality Engineering at Coupa Software Inc., reflecting his specialized expertise and significant industry contributions in AI-driven compliance and software engineering. With total annual compensation of \$329,778.68 in 2024, he significantly exceeds industry compensation benchmarks for similar roles. Industry-standard data from authoritative sources such as OFLC, Bureau of Labor Statistics, Salary.com, Payscale, and Talent.com confirm that his earnings surpass the highest 10% of peers, notably exceeding typical high-end salaries ranging from approximately \$187,946 to \$273,915 annually. His compensation thus places him within the top percentile of earners in his profession, underscoring both his exceptional value to Coupa and the substantial demand for his specialized skills in the marketplace.
- **The Petitioner is a member of prestigious organizations that require outstanding achievements for membership**, demonstrating his exceptional standing in his field. Notably, the Petitioner holds membership in Sigma Xi (Full Member), IETE Fellowship, and Hackathon Raptors Fellowship, each requiring exceptional achievement and rigorous selection processes based on peer validation and demonstrated impact. Sigma Xi, the world's largest multidisciplinary research honor society, admitted him as a Full Member following rigorous evaluation by distinguished researchers, acknowledging his original, peer-reviewed research and significant scientific contributions. Similarly, the IETE Fellowship, governed by India's leading electronics and telecommunications authority, acknowledges his sustained, impactful technical leadership and influential innovations, surpassing rigorous eligibility criteria. Lastly, his Hackathon Raptors Fellowship is reserved for technology leaders whose contributions significantly impact software engineering and AI, validated through meticulous peer review by globally respected experts.

On top of this, the Petitioner is a member of the **International Association of Engineers (IAENG)**, a **globally recognized non-profit organization dedicated to advancing engineering and computer science** through collaboration, innovation, and knowledge exchange. IAENG's membership includes a wide network of accomplished professionals, researchers, and academics who contribute to the organization's mission of fostering interdisciplinary knowledge exchange and technological advancement. Membership is extended to individuals with a demonstrated record of excellence in engineering practice or research, and reflects peer acknowledgment of professional standing and technical contribution in the global engineering community.

As part of his engagement with IAENG, Mr. Yarram is affiliated with specialized groups such as the **IAENG Society of Artificial Intelligence** and the **IAENG Society of Software Engineering**, which focus on promoting leading-edge research and industrial applications in their respective domains. His inclusion in these technical communities underscores his active involvement in fields at the forefront of AI-driven automation and enterprise software innovation. While not a Fellow, Mr. Yarram's IAENG membership nonetheless affirms his stature as an established expert whose work aligns with the organization's emphasis on impactful engineering solutions and international knowledge leadership (See **Exhibit I-2**).

Finally, the Petitioner is a **Senior Member of the Institute of Electrical and Electronics Engineers (IEEE)**, which is globally recognized as the largest and most prestigious technical professional organization dedicated to advancing technology for the benefit of humanity. With a membership exceeding 400,000 professionals across more than 160 countries, IEEE sets the gold standard for excellence in fields such as electrical engineering, electronics, computer science, and telecommunications. Attaining Senior Member status within this esteemed organization is a mark of significant professional achievement, reserved for those who have made notable contributions and demonstrated advanced expertise in their respective fields. **The Petitioner's inclusion as a Senior Member of IEEE** highlights his exceptional standing within the technology community. This honor, which **only about 10% of IEEE members achieve**, reflects the Petitioner's professional maturity, his significant accomplishments in the industry, and his unwavering commitment to technological innovation. By attaining this prestigious status, the Petitioner joins an elite group of professionals who are recognized for their contributions to advancing technology, gaining access to an influential network of experts, and numerous leadership opportunities within IEEE. His elevation to Senior Member is a testament to the high level of recognition and respect he has earned in his field (See **Exhibit I-2**).

The Petitioner, as an IEEE Senior Member and a key figure in the IEEE Artificial Intelligence & Automated Systems Policy Committee (AIPC), exemplifies exceptional leadership through his **integral role in IEEE-USA's 2025 Congressional Visit Day (CVD)**. As a team leader advocating for critical legislative priorities, he spearheaded efforts to safeguard federal R&D investments in agencies such as NSF, NIST, DOE, and DOD, which are cornerstones of U.S. innovation. His direct engagement with policymakers underscores his commitment to advancing bipartisan initiatives like the CREATE AI Act, which democratizes AI research infrastructure, and the Keep STEM Talent Act, ensuring the retention of top-tier STEM graduates. By championing strategic immigration reforms and robust R&D funding, the Petitioner fortifies public-private partnerships, addresses national security imperatives, and sustains America's global technological leadership. These contributions not only reflect his distinguished influence in shaping policy but also affirm his indispensable role in advancing U.S. competitiveness and long-term technological supremacy (See **Exhibit I-3**).

- The Petitioner has been **invited to judge the work of others in his field at several prestigious industry events**. His prominent role on the IEEE Artificial Intelligence & Automated Systems Policy Committee (AIPC) involves crafting influential policy frameworks that guide global standards for ethical and sustainable AI development. Additionally, his invitations to serve as a

reviewer for prestigious international conferences, such as ERCICAM 2025, IEEE INC4 2025, SocProS 2025, and CODE AI 2025, highlight his authority in assessing the technical merit and originality of leading-edge research. As an evaluator for IEEE's Senior Member Program, he played a crucial role in determining membership eligibility based on rigorous professional standards. Furthermore, his involvement as a scholarly reviewer at institutions such as NMIT, his book reviews for IGI Global Publishing, peer-review activities for respected journals including IAES International Journal of Artificial Intelligence and CSER Journal, and **his judging at HackMerced X and the HackDavis Hackathons** underscore his significant influence and recognition within the academic and professional communities. Collectively, these roles affirm his authoritative position, validating his substantial contributions to maintaining and enhancing standards of excellence and innovation in his discipline.

As a part of the IEEE AIPC, **the Petitioner has played a pivotal role as a reviewer of the draft bill for the 2025 Validation and Evaluation for Trustworthy Artificial Intelligence Act**, a bipartisan legislative proposal introduced by U.S. Senators John Hickenlooper and Shelley Moore Capito to establish national guidelines for third-party audits of AI systems. Solicited by IEEE for his technical and compliance expertise in AI governance, the Petitioner critically evaluated the bill's text to ensure clarity, compliance, and alignment with international standards. His contributions included refining definitions, advocating for ongoing AI system evaluations to address emergent risks, and aligning provisions with existing laws and global data privacy frameworks. His feedback directly shaped the bill's technical guidelines, risk-mitigation protocols, and compliance mechanisms, as evidenced by his substantive edits and collaborative discussions with stakeholders in the draft's annotated review. Moreover, the Petitioner has also played an active role in reviewing the **American Science Acceleration Project Initiative**, a national initiative sponsored by Senator Rounds and Senator Martin Heinrich to leverage emerging technologies, especially AI, to expedite advancement in scientific domains. By serving as a trusted arbiter of legislative quality and policy efficacy, the Petitioner's work underscores his recognized authority to judge high-impact initiatives at the intersection of AI innovation and public safety (See **Exhibit F-1 & F-2**).

The Petitioner has further demonstrated authoritative judgment and thought leadership by shaping U.S. AI standards through formal contributions to the National Institute of Standards and Technology (NIST), a premier federal agency advancing AI standards for economic security and public trust. **His technical review of NIST's AI Standards "Zero Drafts" Pilot Project** was acknowledged by NIST as instrumental to early concept papers. This engagement underscores his capacity to shape foundational AI governance frameworks and evaluate high-impact work at a national level, exceeding ordinary professional expectations (See **Exhibit I-5**).

The Petitioner's role as a Member of the IEEE P7999 Standards Working Group demonstrates his active participation in reviewing, evaluating, and shaping industry-leading standards on AI ethics, which is an indication of both his recognized expertise and his ability to judge the work of other professionals in the field. As a core contributor to the development of the IEEE 7999 series, Mr. Yarram has provided substantive feedback on draft standards, influencing technical content and ensuring consensus among diverse stakeholders. (See **Exhibit I-6**).

The Petitioner has been selected as a certified Judge by Major League Hacking (MLH) for the Rice Datathon 2025. Major League Hacking is a global organization and a certified B Corporation that supports over 300 weekend-long hackathons, bringing together over 500,000 developers around the world. The Petitioner evaluated complex technical projects using rigorous criteria, including data innovation, technical skill, and social impact. His expertise was further sought by **Hackathon 2025**, sponsored by MLTool Technologies, where his evaluations directly identified groundbreaking solutions and inspired emerging innovators. These roles underscore his authoritative standing in the field, as his judgment was pivotal in discerning excellence at internationally recognized competitions. In addition to the above, the Petitioner has been selected as a Judge at the **Synthack Hackathon 2025**, a prestigious event sponsored by the IEEE (See **Exhibit I-7**).

- The Petitioner has **authored scholarly articles in professional journals and high-ranking conferences within his field.** His influential research, published in the *Journal of Computational Analysis and Applications*, addresses critical advancements in predictive test automation, anomaly detection, chaos engineering, deep learning applications, microservices optimization, and edge computing. These articles are recognized for their intellectual originality and significant impact on both academia and industry, and have been cited multiple times by peers in the field. Additionally, his substantial contributions presented at esteemed IEEE conferences, including COMP-SIF and ICICACS, highlight innovative AI methodologies for cybersecurity, anomaly detection, and advanced biometric authentication. Each publication underwent rigorous peer review, reinforcing the caliber of his research. Further underscoring his scholarly impact, his work has also been accepted for publication by Springer in the renowned *Lecture Notes in Electrical Engineering* series. Collectively, these numerous high-quality publications firmly position the Petitioner as a thought leader whose research substantially advances the fields of software engineering and AI-driven compliance.
- **The Petitioner's contributions to advancing artificial intelligence (AI) innovation and mentorship have garnered significant recognition in globally circulated media.** He has been prominently featured in *The Economic Times*, India's foremost business publication, with a monthly readership exceeding **50 million** and international reach. He has also been featured in *The South India Times*, a renowned Indian newspaper. A June 2025 article titled "**Synthack Hackathon 2025: Global Tech Leaders Mentor India's Next-Gen AI Talent**" highlights the Petitioner's selection by leading tech organizations to mentor emerging AI innovators at this prestigious event, underscoring his reputation as a luminary in the field. The publication emphasizes his pioneering methodologies in AI-driven problem-solving and praises his transformative role in shaping the future of global AI education (See **Exhibit I-8**).
- **The Petitioner's continued work in the field of Software Engineering, specializing in AI for Compliance, will also substantially benefit the U.S.** The Petitioner intends to continue leveraging his extraordinary abilities in AI-driven platform engineering, compliance automation, and fintech resilience to significantly advance U.S. priorities in financial innovation, economic stability, and technological leadership. With nearly two decades of experience, he will develop intelligent compliance platforms tailored to complex global regulatory frameworks (including GDPR, AML, SOC2, DORA, and ESG), aligning directly with Executive Order 14179's

objectives of removing barriers to American AI innovation. His planned innovations in predictive analytics will proactively mitigate financial risks, streamline regulatory compliance, and reinforce financial sector stability, supporting recent U.S. policy initiatives aimed at deregulation and innovation. Additionally, by embedding responsible and transparent AI mechanisms into enterprise systems, his work will foster trust in AI deployment free from ideological bias, promoting ethical AI aligned with national strategic goals. Leading global teams, the Petitioner will nurture a culture of innovation and technical excellence, strengthening the U.S. workforce and maintaining America's competitive edge in emerging technologies. Ultimately, his proposed contributions will have transformative economic impacts, supporting industries managing billions of dollars, minimizing regulatory penalties, and enhancing U.S. economic resilience and digital security, thereby sustaining and reinforcing the nation's global leadership in ethical AI and fintech innovation (See **Exhibit I-9**).

The totality of this evidence clearly shows that the Petitioner has been internationally recognized as outstanding in the field of **Software Engineering, specializing in AI for Compliance**. As such, the Petitioner meets the requirements for EB-1A classification as an Alien of Extraordinary Ability.

V. CONCLUSION

Based on the Petitioner's impressive credentials, supported by the enclosed Exhibits and the many endorsements they have received from experts in the field, we respectfully request approval of EB-1A immigrant classification.

Sincerely,

Rohitkumar Srinivasa, *Esq.*
Attorney to the Petitioner

INDEX OF EXHIBITS

INDEX OF EXHIBITS

EXHIBIT A THE PETITIONER’S BACKGROUND INFORMATION	
A-1	Mr. Yarram’s Resume and Academic Records.
A-2	Copy of Passport and Evidence of Nonimmigrant Status.
A-3	Copy of prior I-140 approvals.

EXHIBIT B ABOUT THE FIELD AND THE PETITIONER’S PROPOSED WORK IN THE UNITED STATES	
B-1	Information about the field.
B-2	Statement of intent detailing how Mr. Yarram intends to continue his work in the U.S.
B-3	Employment Verification Letter.

EXHIBIT C ORIGINAL CONTRIBUTION OF MAJOR SIGNIFICANCE	
C-1	A statement from Priya Gopinath, attesting to the Petitioner's original contributions and critical role at Coupa Software Inc.
C-2	A statement from Tom Gardam, attesting to the Petitioner's original contributions and critical role at Pegasystems.
C-3	A statement from Nagaraju Dasari, attesting to the Petitioner's original contribution and Critical Role at Pegasystems.
C-4	Documents evidencing the Petitioner's critical contributions towards the Coupa Risk Assess (CRA) Platform.
C-5	Documentation evidencing the Petitioner's critical contributions towards Deutsche Bank for its CRA platform.
C-6	Additional documents evidencing the Petitioner's critical contributions at Coupa Software Inc.
C-7	Evidence of the major significance of the Petitioner’s contributions at Coupa Software Inc.
C-8	Evidence of the Petitioner’s critical contributions at Pegasystems.

C-9	Evidence of the major significance of the Petitioner's contributions at Pegasystems.
------------	--

EXHIBIT D LEADING OR CRITICAL ROLE	
Senior Manager, Quality Engineering at Coupa Software, Inc.	
D-1	Organization chart showcasing the Petitioner's role at Coupa.
D-2	Evidence of the Petitioner's leadership role in talent acquisition and managerial oversight at Coupa.
D-3	A statement from Mark DeLuca , attesting to the Petitioner's critical role and contributions at Coupa Software Inc.
D-4	Documents confirming the distinguished reputation of Coupa.
D-5	Media coverage and accolades highlighting Coupa's leadership and standing in the field.
Principal Software Engineer at Pegasystems	
D-6	The Petitioner's offer letter, experience certificate, and compensation revision letter at Pegasystems.
D-7	Documents confirming the distinguished reputation of Pegasystems.
D-8	Media coverage and accolades highlighting Pegasystems' leadership and standing in the field.

EXHIBIT E HIGH SALARY OR OTHER REMUNERATION	
E-1	Evidence of the Petitioner's remuneration for his role at Coupa.
E-2	Several salary reports demonstrating that his remuneration in this occupation substantially exceeds the top end of the range.

EXHIBIT F JUDGING THE WORK OF OTHERS	
F-1	Evidence of the Petitioner's role as a key member of the IEEE AIPC.
F-2	A Statement from Erica R. Wissolik, attesting to the Petitioner's role as a key member of the IEEE AIPC.

F-3	A Statement from Dr. Zhi Ding, attesting to the Petitioner's role as a key member of the IEEE AIPC.
F-4	Evidence of the Petitioner's role as a reviewer for international conferences.
F-5	Evidence of the Petitioner serving as an evaluator for the IEEE Senior Member program.
F-6	Evidence of the Petitioner's role as a reviewer for scholarly research presentations.
F-7	Evidence of the Petitioner's role as a book reviewer.
F-8	Evidence of the Petitioner's role as a reviewer for Scholarly Journals.
F-9	Evidence of the Petitioner's role as a Judge for various Hackathons.

EXHIBIT G AUTHORSHIP OF SCHOLARLY ARTICLES

G-1	Copies of the Petitioner's scholarly publications and scholarly articles.
G-2	Information about the prestigious publications and journals that featured the articles authored by the Petitioner, including their reputation and standing in the field.
G-3	A Statement from Dr. Piyush Kumar Pareek, attesting to the Petitioner's scholarly contributions.

EXHIBIT H MEMBERSHIP

H-1	Evidence of Mr. Yarram's place as a Full Member of Sigma Xi.
H-2	Information about Sigma Xi and its global reputation.
H-3	Evidence of Mr. Yarram's place as a Fellow of the IETE.
H-4	Information about IETE and its global reputation.
H-5	Evidence of Mr. Yarram's place as a Fellow of Raptors.
H-6	Information about Raptors and its global reputation.

EXHIBIT I FINAL MERITS

I-1	Evidence of the Petitioner's critical roles and contributions at LogMeIn and LendingClub.
I-2	Evidence of the Petitioner's Senior Membership at IEEE and Membership in IAENG.
I-3	Evidence of the Petitioner's role in IEEE-USA's Congressional Visit Day.
I-4	A Statement from Dr. Cedric Westphal, attesting to the Petitioner's contributions as a key member of the IEEE AIPC.
I-5	Evidence of the Petitioner's role as a reviewer for the NIST AI Standards Zero Drafts project.
I-6	Evidence of the Petitioner's role as a Member of the IEEE P7999 Standards Working Group.
I-7	Evidence of the Petitioner's role as a Judge at the Rice Datathon, Hackathon 2025, and the Synthack Hackathon.
I-8	Published material about the Petitioner and his work.
I-9	Documentary evidence that the Petitioner's continued work in the field is poised to bring significant benefits to the U.S.
I-10	Regulatory Failures Demonstrating the Need for AI-Powered Compliance Platforms.
